Materials with Defects Chun Zhu, Bin Gong, Weiyao Guo, 2025-09-25 Under the influence of geostress seepage weathering and artificial disturbance rock materials inevitably develop defects fissures cracks pores voids faults etc which greatly reduce the physical and mechanical properties of rock materials With the development of large scale engineering construction and resource exploitation there is an increasing demand for high strength rock masses Thus the development and refinement of mechanics theories pertaining to rock materials with defects are necessary The substratum of these large scale engineering projects predominantly comprises various types of rock mass materials Those typical defects of rock mass materials often manifest at scales beyond the mesoscopic and microscopic scales but below the macroscopic scale making it difficult to discern statistical laws governing their behavior Therefore it is difficult to determine the reasonable statistical scale of volume units when constructing the theoretical system of mechanics At the same time testing the physical and mechanical parameters of rock materials with defects will also facilitate us to have a clear understanding of the reliability of the project These related research and innovations provide crucial insights for stability analysis in engineering construction *Yamaha*

YZ125(T), 1986 Forthcoming Books Rose Arny, 2003 **Novel Diagnostic and Therapeutic Strategies in the Management of Cerebral Gliomas** Valeria Barresi, Maria Caffo, Giuseppe Lombardi, Letteria Minutoli, Emeline Tabouret, Herui Wang, 2024-10-29 Cerebral gliomas account for 45% of all primary central nervous system CNS tumors The median survival after the initial diagnosis of glioblastoma GBM is only 15 months and less than 10% of patients survive three years post diagnosis Surgical treatment followed by adjuvant therapies such as radiotherapy and chemotherapy represents the classical strategy in glioma management The revised WHO 2016 classification now distinguishes the oligodendrogliomas with 1p19q codeletion and IDH mutation from the astrocytomas with or without IDH mutations thereby creating homogenous and pathologically distinct subgroups While the status of gene expression and mutations define components of GBM subtypes it was also found that response to therapies was different for each subtype suggesting that personalized treatment based on genomic alterations could lead to a more favorable outcome for this disease **Critical Metals in Northwest China**
