Computational Lexical Semantics Patrick Saint-Dizier, Evelyn Viegas, 1995-02-24 Lexical semantics has become a major research area within computational linguistics

drawing from psycholinguistics knowledge representation and computer algorithms and architecture Research programs whose goal is the definition of large lexicons are asking what the appropriate representation structure is for different facets of lexical information Among these facets semantic information is probably the most complex and the least explored Computational Lexical Semantics is one of the first volumes to provide models for the creation of various kinds of computerized lexicons for the automatic treatment of natural language with applications to machine translation automatic indexing and database front ends knowledge extraction among other things It focuses on semantic issues as seen by linguists psychologists and computer scientists Besides describing academic research it also covers ongoing industrial projects
