IUTAM Symposium on Solver-Coupling and Co-Simulation Bernhard Schweizer, 2019-05-14 This is the Proceedings of the IUTAM Symposium on Solver Coupling and Co-Simulation that was held in Darmstadt, Germany, September 18-20, 2017. The symposium focused on recent advances in the development of numerical methods for solver coupling, like new explicit, implicit, and semi-implicit co-simulation methods, new approaches for realizing variable communication time grids, and advances in the stability and convergence analysis of solver coupling methods. Recent developments in the practical application of co-simulation methods, for instance new fields of application for solver coupling, approaches, new developments in the parallelization of dynamic models with co-simulation techniques, and standardization of co-simulation interfaces, i.e., standardization of data and model exchange, were also discussed. The book brings together the research results of leading scientists in applied mathematics, mechanics, and engineering science, thus contributing to further develop numerical methods for coupled simulations. *2014 International Conference on Advanced Education and Management (ICAEM2014)*

, 2014-02-13 The ICAEM2014 aims to bring together researchers, educators, and students from around the world in both industry and academia for sharing the state-of-the-art research results and applications for exploring new areas of research and development and for discussing emerging issues on education and management fields. We received a total of 312 submissions from various parts of the world. The Technical Program Committee worked very hard to have all papers reviewed before the review deadline. The final technical program consists of 92 papers. There are one keynote speech and 2 invited sessions. The proceedings were published by DEStech Publications, Inc. and will be submitted to Ei Compindex databases for indexing. We would like to mention that due to the limitation of the conference venue capacity, we are not able to include many fine papers in the technical program. Our apology goes to those authors. *Using Games and Simulations for Teaching and Assessment* Harold F. O'Neil, Eva L. Baker, Ray S. Perez, 2016-03-31 Using Games and Simulations for Teaching and Assessment Key

Issues comprises a multidisciplinary investigation into the issues that arise when using games and simulations for educational purposes Using both theoretical and empirical analyses this collection examines cognitive motivational and psychometric issues with a focus on STEM content Unlike other research based volumes that focus solely on game design or the theoretical basis behind gaming this book unites previously disparate communities of researchers from civilian to military contexts as well as multiple disciplines to critically explore current problems and illustrate how instructionally effective games and simulations should be planned and evaluated While computer based simulations and games have the potential to improve the quality of education and training Using Games and Simulations for Teaching and Assessment Key Issues shows how the science of learning should underlie the use of such technologies Through a wide ranging yet detailed examination chapter authors provide suggestions for designing and developing games simulations and intelligent tutoring systems that are scientifically based outcomes driven and cost conscious

Algebraic Modeling of Topological and Computational Structures and Applications Sofia Lambropoulou, Doros Theodorou, Petros Stefaneas, Louis H. Kauffman, 2017-12-14. This interdisciplinary book covers a wide range of subjects from pure mathematics (knots, braids, homotopy theory, number theory) to more applied mathematics (cryptography, algebraic specification of algorithms, dynamical systems and concrete applications, modeling of polymers and ionic liquids, video music and medical imaging). The main mathematical focus throughout the book is on algebraic modeling with particular emphasis on braid groups. The research methods include algebraic modeling using topological structures such as knots, 3-manifolds, classical homotopy groups and braid groups. The applications address the simulation of polymer chains and ionic liquids as well as the modeling of natural phenomena via topological surgery. The treatment of computational structures including finite fields and cryptography focuses on the development of novel techniques. These techniques can be applied to the design of algebraic specifications for systems modeling and verification. This book is the outcome of a workshop in connection with the research project Thales on Algebraic Modeling of Topological and Computational Structures and Applications held at the National Technical University of Athens, Greece, in July 2015. The reader will benefit from the innovative approaches to tackling difficult questions in topology, applications and interrelated research areas which largely employ algebraic tools.
