Alford,Suzanne Ferriss,2016-04-06 An Alternative History of Bicycles and Motorcycles Two Wheeled Transportation and Material Culture accounts for the nineteenth century creation and development of two wheeled vehicles both human powered and motorized Specifically the book focuses on the period from 1885 which saw the appearance simultaneously of the Safety bicycle and the Einspur the first motorcycle to 1920 while exploring implications for later bicycling and motorcycling We argue that invention of these vehicles rather than the product of gifted individuals should be seen as the consequence of a number of historical economic cultural and political forces that intersect so unpredictably that the notion of a genius inventor is reductive The common evolutionary model of development from the bicycle to the motorcycle oversimplifies both the technology and its origins Stripping the vehicles of all their material and cultural associations such a model fails to advance our understanding of the devices their creators and their riders Taking a contemporary vehicle and tracing its lineage creates a false sense of evolutionary necessity in its creation and fails to account for the many possible developmental paths that were for whatever reason abandoned By contrast our book adopts a material culture approach a form of inquiry that stresses the connections between artifacts and social relations We consider not simply the bicycle and motorcycle as material objects but focus also on the complex socio political and economic convergences that produced the materials materials that in turn themselves shaped the vehicles appearance function and adoption by riders **Hyperthermic Oncology from Bench to Bedside** Satoshi Kokura,Toshikazu Yoshikawa,Takeo Ohnishi,2016-06-07 This comprehensive work broadens readers understanding of the rudimentary mechanism of the anti cancer effect of hyperthermia It also presents state of the art clinical outcomes by hyperthermia treatment of cancer In the past few decades basic and clinical research have shown through in vitro experiments that hyperthermia inhibits epithelial mesenchymal transition EMT resulting in the prevention of metastasis It also has been learned that hyperthermia shows its superior benefit when applied in combination with radiation therapy chemotherapy or various immunotherapies as treatments of several types of carcinoma The chapters here from expert contributors describe the details of their research for each type of cancer This book provides not only an overview and

the current status of hyperthermia but also its future perspectives Therefore this volume will greatly benefit oncologists radiologists and radiology technologists and chemotherapists who are involved in immunotherapy for all kinds of cancer
