Arithmetic and Geometric Sequences

Arithmetic sequences have a constant difference between terms. Geometric sequences have a constant ratio (quotient) between terms.

1. Each sequence below is either arithmetic or geometric, but some terms are missing. Determine the missing terms.

a) Geometric: 11, _____, _____, 11, 81, 121

b) What is the value of r for this sequence?

c) Arithmetic: 10, 45d, _____, _____, 34, 222

d) What is the value of d for this sequence?

Distributive Property/Combine Like Terms

2. The distributive property states that $a(b+c) = ab+ac$. When you combine like terms, you add (or subtract) all terms with the variable parts the same. Evaluate and/or solve each of the following. (If it's an expression, simplify it; if it's an equation, solve for x and check.)

a) This is an expression, so simplify it: $3(2x-7)$	b) This is an equation, so solve and check it: $3(2x-7) = 30$	c) This is an expression, so simplify it: $2x + 3x - 12 + 8$	d) This is an equation, so solve it and check it: $3x - 2x = 8 - 64$	e) Simplify: $3(x-5) + 4(2x-3)$	f) Simplify: $5(x-5) + 4(2x-3)$

Exponential Decay

3. Mr. Schultz bought a car for \$10,000. It loses 3% of its value every year.

- Write an equation representing its value, y , after a number of years.
 - Predict its value after seven years. Round to the nearest hundred dollars.
 - Predict when his car will be worth only \$1,000.
4. Consider the equation $y = 20(0.85)^t$
- Make a table and graph it.
 - What is the initial value?
 - By what percentage is it decreasing each time period?
 - How many time periods will it take for it to decay to one-tenth of the initial value?

Exponential Growth

5. Ms. Collaps is saving for a new car. She puts \$1,000 in the bank at a rate of 4.2% interest compounded yearly. She needs \$10,000 to buy her car. How many years will it take for her to have enough money?

6. Consider the equation $y = 20(1.25)^t$

- Make a table and graph it.
- What is the initial value?
- By what percentage is it increasing each time period?
- How many time periods will it take for it to grow to six times the initial value?

Exponents

7. Simplify each of the following. Express your answers using only positive exponents. Remember that $x^{-a} = \frac{1}{x^a}$.

a) $x^{10}x^4$ b) $\frac{x^{10}}{x^{10}}$ c) $(3x^2)^3$ d) $x^3x^{-4}x^{10}$ e) $x^{10}x^{-10}$ f) $\frac{x^{10}}{x^{10}}$ g) $(x^{-10})^3$ h) $\frac{2x^3x^2x^4x^{10}}{3x^2x^2x^2}$ i) 8^4

8. "When in doubt, write it out". Simplify each of the following by writing them out the long way. Use only positive exponents. One of them has been done for you.

Stamate, Tomasz Szemberg, 2020-09-01 This proceedings volume presents selected peer reviewed contributions from the 26th National School on Algebra which was held in Constanța Romania on August 26 September 1 2018 The works cover three fields of mathematics algebra geometry and discrete mathematics discussing the latest developments in the theory of monomial ideals algebras of graphs and local positivity of line bundles Whereas interactions between algebra and geometry go back at least to Hilbert the ties to combinatorics are much more recent and are subject of immense interest at the forefront of contemporary mathematics research Transplanting methods between different branches of mathematics has proved very fruitful in the past for example the application of fixed point theorems in topology to solving nonlinear differential equations in analysis Similarly combinatorial structures e.g. Newton Okounkov bodies have led to significant advances in our understanding of the

asymptotic properties of line bundles in geometry and multiplier ideals in algebra This book is intended for advanced graduate students young scientists and established researchers with an interest in the overlaps between different fields of mathematics A volume for the 24th edition of this conference was previously published with Springer under the title Multigraded Algebra and Applications ISBN 978 3 319 90493 1 **Uses of Technology in Primary and Secondary**

This book provides international perspectives on the use of digital technologies in primary lower secondary and upper secondary school mathematics It gathers contributions by the members of three topic study groups from the 13th International Congress on Mathematical Education and covers a range of themes that will appeal to researchers and practitioners alike The chapters include studies on technologies such as virtual manipulatives apps custom built assessment tools dynamic geometry computer algebra systems and communication tools Chiefly focusing on teaching and learning mathematics the book also includes two chapters that address the evidence for technologies effects on school mathematics The diverse technologies considered provide a broad overview of the potential that digital solutions hold in connection with teaching and learning The chapters provide both a snapshot of the status quo of technologies in school mathematics and outline how they might impact school mathematics ten to twenty years from now Identity and Symbolic Interaction

Richard T. Serpe,Robin Stryker,Brian Powell,2020-04-22 This book examines identity theory s centrality within social psychology and its foundations within structural symbolic interaction highlighting its links not only to other prominent sociological subfields but also to other theoretical perspectives within and beyond sociology The book provides a synthetic overview outlining the intellectual lineage of identity theory within structural symbolic interactionism and how the Indiana School of identity theory and research associated especially with Sheldon Stryker relates to other symbolic interactionist traditions within sociology It also analyses the latest developments in response to the push to integrate identity theory which initially focused on role identities with the study of personal group and social identities Further it discusses the relationship between identity theory and affect control theory providing a sense of the many substantive topics within sociology beyond social psychology for which the study of identity has important sometimes underappreciated implications The book concludes with a chapter summarizing the interrelated lessons learned while also reflecting on remaining key questions and challenges for the future development of identity theory *Computer Algebra in Scientific Computing* Andreas Weber,2019-11-04

Although scientific computing is very often associated with numeric computations the use of computer algebra methods in scientific computing has obtained considerable attention in the last two decades Computer algebra methods are especially suitable for parametric analysis of the key properties of systems arising in scientific computing The expression based computational answers generally provided by these methods are very appealing as they directly relate properties to parameters and speed up testing and tuning of mathematical models through all their possible behaviors This book contains

8 original research articles dealing with a broad range of topics ranging from algorithms data structures and implementation techniques for high performance sparse multivariate polynomial arithmetic over the integers and rational numbers over methods for certifying the isolated zeros of polynomial systems to computer algebra problems in quantum computing
