Daniel Everett confounds the conventional wisdom that language originated with *Homo sapiens* 150 000 years ago and that we have a language instinct. Drawing on evidence from a wide range of fields including linguistics, archaeology, biology, anthropology and neuroscience he shows that our ancient ancestors *Homo erectus* had the biological and mental equipment for speech one and half million years ago and that their cultural and technological achievements including building ocean going boats make it overwhelmingly likely they spoke some kind of language. *How Language Began* sheds new light on language and culture and what it means to be human and as always Daniel Everett spices his account with incident and anecdote. His book is convincing, arresting and entertaining.
