Tutorials in Radiotherapy

Physics Patrick N. McDermott, 2016-08-19 The Topics Every Medical Physicist Should Know Tutorials in Radiotherapy Physics Advanced Topics with Problems and Solutions covers selected advanced topics that are not thoroughly discussed in any of the standard medical physics texts The book brings together material from a large variety of sources avoiding the need for you to search through and digest the vast research literature The topics are mathematically developed from first principles using consistent notation Clear Derivations and In Depth Explanations The book offers insight into the physics of electron acceleration in linear accelerators and presents an introduction to the study of proton therapy It then describes the predominant method of clinical photon dose computation convolution and superposition dose calculation algorithms It also discusses the Boltzmann transport equation a potentially fast and accurate method of dose calculation that is an alternative to the Monte Carlo method This discussion considers Fermi Eyles theory which is widely used for electron dose calculations The book concludes with a step by step mathematical development of tumor control and normal tissue complication probability models Each chapter includes problems with solutions given in the back of the book Prepares You to Explore Cutting Edge Research This guide provides you with the foundation to read review articles on the topics It can be used for self study in graduate medical physics and physics residency programs or in vendor training for linacs and treatment planning systems

Laser Interaction with Heterogeneous Biological Tissue Kirill Kulikov, Tatiana Koshlan, 2018-06-27

This book introduces readers to the principles of laser interaction with biological cells and tissues with varying degrees of organization In addition to considering the problems of biomedical cell diagnostics and modeling the scattering of laser irradiation of blood cells for biological structures dermis epidermis vascular plexus it presents an analytic theory based on solving the wave equation for the electromagnetic field It discusses a range of mathematical modeling topics including optical characterization of biological tissue with large scale and small scale inhomogeneities in the layers heating blood vessels using laser irradiation on the outer surface of the skin and thermo chemical denaturation of biological structures based on the example of human skin In this second edition a new electrodynamic model of the interaction of laser radiation with blood cells is presented for the structure of cells and the in vitro prediction of optical properties The approach developed makes it possible to determine changes in cell size as well as modifications in their internal structures such as transformation and polymorphism nucleus scattering which is of interest for cytological studies The new model is subsequently used to calculate the size distribution function of irregular shape particles with a variety of forms and structures which allows a cytological analysis of the observed deviations from normal cells

Fracture and Fatigue Characterisation of Cortical

Bone Tissue Marcelo F. S. F. de Moura, Nuno Dourado, 2024-09-09 Fracture and Fatigue Characterisation of Cortical Bone Tissue is a key guide to bone fracture and fatigue focusing on quasi static and fatigue fracture characterisation of cortical bone tissue Discussing the fundamental aspects of fracture mechanics and fatigue which are applicable to many orthotropic

materials this book examines novel cutting edge approaches to analyse and model bone fracture and fatigue As the population ages across the globe bone fracture and fatigue has become a fundamental part of mechanical and biomedical engineering research Beginning with a thorough description of fracture mechanics and fatigue the book describes non linear fracture mechanics under quasi static and fatigue analyses It goes on to present a cohesive zone modelling method which is appropriate for mode I mode II and mixed mode I II loading Presenting the latest research this book describes cutting edge fracture tests new methods for data reduction purposes and numerical models based on cohesive zone modelling This book is key to aiding both students and professionals in applying fundamental theories and methods to cortical bone tissue The book will be of interest to students and professionals working in mechanical engineering and biomedical engineering including work on quasi static fracture fracture under fatigue loading artificial bones and fracture mechanisms
