The Best Years of British Film Music, 1936-1958 Jan G. Swynnoe, 2002. A study of the British contribution to film music, detailing the idiosyncracies of British film and showing how the differences between it and Hollywood affected composers on both sides of the Atlantic. Jan Swynnoe's study is concerned with the special British contribution to film music, detailing how the idiosyncracies of British film and of the British character set it apart from its Hollywood counterpart. She shows how the differences between the two industries in all aspects of film making variously affected composers on both sides of the Atlantic. In the mid 1930s, when film composers in America were perfecting the formulae of the classical Hollywood score, film music in Britain scarcely existed. Within a year or so, however, top British composers were scoring British films. How this transformation was brought about and how established British concert composers including Vaughan Williams and Arnold Bax faced the challenge of the exacting and often bewildering art of scoring for feature film is vividly described here, and the resulting scores compared with the work of seasoned Hollywood composers. JAN SWYNNOE researched the material on which her book is based over several years at the same time pursuing her musical life as pianist, percussionist, and composer.

Astounding Wonder John Cheng, 2012-03-19. When physicist Robert Goddard, whose career was inspired by H. G. Wells's *War of the Worlds*, published *A Method of Reaching Extreme Altitudes*, the response was electric. Newspaper headlines across the country announced: "Modern Jules Verne Invents Rocket to Reach Moon" while people from around the world, including two World War I pilots, volunteered as pioneers in space exploration. Though premature, Goddard's rocket, alas, was only imagined. The episode demonstrated not only science's general popularity but also its intersection with interwar popular and commercial culture. In that intersection, the stories that inspired Goddard and others became a recognizable genre: science fiction. **Astounding Wonder** explores science fiction's emergence in the era's pulps, colorful magazines that shouted from the newsstands, attracting an extraordinarily loyal and active audience. Pulps invited readers not only to read science fiction but also to participate in it, joining writers and editors in celebrating a collective wonder for and investment in the potential of science. But in conjuring fantastic machines, travel across time and space, unexplored worlds, and alien foes, science fiction

offered more than rousing adventure and romance. It also assuaged contemporary concerns about nation, gender, race, authority, ability, and progress about the place of ordinary individuals within modern science and society in the process of freeing readers to debate scientific theories and implications separate from such concerns. Readers similarly sought to establish their worth and place outside the pulps. Organizing clubs and conventions and producing their own magazines, some expanded science fiction's community and created a fan subculture separate from the professional pulp industry. Others formed societies to launch and experiment with rockets. From debating relativity and the use of slang in the future to printing purple fanzines and calculating the speed of spaceships, fans' enthusiastic industry revealed the tensions between popular science and modern science. Even as it inspired readers' imagination and activities, science fiction's participatory ethos sparked debates about amateurs and professionals that divided the worlds of science fiction in the 1930s and after.

Many Skies Arthur Upgren, 2005-01-18. What if Earth had several moons or massive rings like Saturn? What if the Sun were but one star in a double star or triple star system? What if Earth were the only planet circling the Sun? These and other imaginative scenarios are the subject of Arthur Upgren's inventive book *Many Skies: Alternative Histories of the Sun, Moon, Planets, and Stars*. Although the night sky as we know it seems eternal and inevitable, Upgren reminds us that just as easily it could have been very different. Had the solar system happened to be in the midst of a star cluster, we might have many more bright stars in the sky. Yet had it been located beyond the edge of the Milky Way galaxy, we might have no stars at all. If Venus or Mars had a moon as large as ours, we would be able to view it easily with the unaided eye. Given these or other alternative skies, what might Ptolemy or Copernicus have concluded about the center of the solar system and the Sun? This book not only examines the changes in science that these alternative solar, stellar, and galactic arrangements would have brought, it also explores the different theologies, astrologies, and methods of tracking time that would have developed to reflect them. Our perception of our surroundings, the number of gods we worship, the symbols we use in art and literature, even the way we form nations and empires are all closely tied to our particular and accidental placement in the universe. *Many Skies*, however, is not merely a fanciful play on what might have been. Upgren also explores the actual ways that human interferences, such as light pollution, are changing the night sky. Our atmosphere, he warns, will appear very different if we have a belt of debris circling the globe and blotting out the stars, as will happen if advertisers one day pollute space with brilliant satellites displaying their products. From fanciful to foreboding, the scenarios in *Many Skies* will both delight and inspire reflection, reminding us that ours is but one of many worldviews based on our experience of a universe that is as much a product of accident as it is of intention.

THEN: Science Fiction Fandom in the UK: 1930-1980 Rob Hansen, 2016

War over Lemuria Richard Toronto, 2013-05-09. Life magazine described the Shaver Mystery as the most celebrated rumpus that rocked the science fiction world. Its creators said it was a new wave in science fiction. Critics called it dangerous nonsense and labeled its fans the lunatic fringe. Whatever else the Shaver Mystery was, it became a worldwide sensation between 1945

and 1948 one of the greatest controversies to hit the science fiction genre Today these stories of the remnants of a sinister ancient civilization living in caverns under the Earth are an all but forgotten sidebar to the historical record The Shaver Mystery began as a series of science fiction yarns in Amazing Stories nearly 70 years ago The men behind it Ray Palmer and Richard Shaver were derided and seldom understood by a fandom that did its best to sweep them under the carpet of history Though Ray Palmer was one of the earliest and biggest names in SF fandom credited with many firsts in his field his fannish brethren have roundly ignored him thanks to the Shaver Mystery What is the truth behind these men and their mystery This is the question writers and editors that promoted the Shaver Mystery try to answer as they reveal the behind the scenes story of the phenomenon known as Shaverism

Words and Images on the Screen Ágnes Pethő, 2009-03-26 The screen has never been merely a canvas for the images to be displayed but also to quote Jean Luc Godard a blank page a surface for inscriptions and a stage for all kinds of linguistic occurrences be their audible or visual Word did not come into the world of cinema at the time of the talkies but has been a primordial medial companion that has shaped the cinematic experience from its very beginnings This volume offers a collection of essays that question the role of words and images in the context of moving pictures covering a wide area of their interconnectedness How can we analyse literary adaptations What is the role of adaptations in the evolution of specific national cinemas In what way are written texts used in films Is the model of the word and image relations used in silent films still applicable today What major paradigms can be discerned within the multiplicity of ways Jean Luc Godard s cinema plays with words and images Are these models of modernist or postmodern cinema reflected in films of other directors like R W Fassbinder How do avant garde works deal with the word and image debate What are the connections of animation or computer games with verbal text and narrative What is the phenomenon of jet setting and how does it connect to the ideological implications of the relations between the culture of books and films What happens when Hamlet is completely rewritten reflecting the ideology of late capitalism What happens from the point of view of literariness or rejection of literariness when films are made vehicles of national propaganda How do words get mediated through images These are some of the questions addressed in the present volume by in depth case studies of cinematic intermediality or more general surveys regarding cinema s long lasting liaisons with language or literature

Consuming Power David E. Nye, 1999-02-18 Nye uses energy as a touchstone to examine the lives of ordinary people engaged in normal activities How did the United States become the world s largest consumer of energy David Nye shows that this is less a question about the development of technology than it is a question about the development of culture In Consuming Power Nye uses energy as a touchstone to examine the lives of ordinary people engaged in normal activities He looks at how these activities changed as new energy systems were constructed from colonial times to recent years He also shows how as Americans incorporated new machines and processes into their lives they became ensnared in power systems that were not easily changed they made choices about the conduct of their lives and those choices accumulated to produce a consuming culture Nye examines a sequence of large systems that acquired and then lost technological momentum over the course of American history including water power steam power electricity the internal combustion engine atomic power and computerization He shows how each system became part of a larger set of social constructions through its links to the home the factory and the city The result is a social history of America as seen

through the lens of energy consumption
