Neuroanatomy of Language Regions of the Human Brain Michael Petrides, 2013-12-03 Many studies of the neural bases of language processes are now conducted with functional and structural neuroimaging Research is often compromised because of difficulties in identifying the core structures in the face of the complex morphology of these regions of the brain Although there are many books on the cognitive aspects of language and also on neurolinguistics and aphasiology **Neuroanatomy of Language Regions of the Human Brain** is the first anatomical atlas that focuses on the core regions of the cerebral cortex involved in language processing This atlas is a richly illustrated guide for scientists interested in the gross morphology of the sulci and gyri of the core language regions in the cytoarchitecture of the relevant cortical areas and in the connectivity of these areas Data from diffusion MRI and resting state connectivity are integrated with critical experimental anatomical data about homologous areas in the macaque monkey to provide the latest information on the connectivity of the language relevant cortical areas of the brain Although the anatomical connectivity data from studies on the macaque monkey provide the most detailed information they are often neglected because of difficulties in interpreting the terminology used and in making the monkey to human comparison This atlas helps investigators interpret this important source of information **Neuroanatomy of Language Regions of the Human Brain** will assist investigators of the neural bases of language in increasing the anatomical sophistication of their research and in evaluating studies of language and the brain Abundantly illustrated with photographs 3 D MRI reconstructions and sections to represent the morphology of the sulci and gyri in the frontal temporal and parietal regions involved in language processing Photomicrographs showing the cytoarchitecture of cortical areas involved in language processing Series of coronal sagittal and horizontal sections identifying the sulci and gyri to assist language investigators using structural and functional neuroimaging techniques All images accompanied by brief commentaries to help users navigate the complexities of the anatomy Integration of data from diffusion MRI and resting state connectivity with critical experimental anatomical data on the connectivity of homologous areas in the macaque monkey

Hans J. ten Donkelaar, Luis Puelles, 2019-11-01 The present series of papers are meant to provoke discussion on neuroanatomical terminology. After publication of the Terminologia Neuroanatomica TNA 2017 <http://FIPAT.library.dal.ca> and its recent ratification by the International Federation of Associations of Anatomists (IFAA) August 9 in London, UK, several neuroscientists were invited to give their views on this new official IFAA terminology. This resulted in 12 papers and one commentary on the following topics: A Further development of a developmental ontology; B Common terminology for cerebral cortex and thalamus; C White matter tracts; and D Neuron types. The suggestions made to improve the TNA will be considered in the next version of the TNA.
