Dark Horst Wilkens,Ulrike Strecker,2017-05-25 This book provides fascinating insights into the development and genetics of
evolutionary processes on the basis of animals living in the dark such as the Astyanax cave fish Biologically functionless traits
show high variability which results from neutral deleterious mutations no longer being eliminated by natural selection which
normally acts to preserve functional capability These negative mutations accumulate until the traits they are responsible for
become rudimentary or even lost The random genetic basis of regressive evolution is in accordance with Nei s Neutral
Theory of Molecular Evolution which applies to the molecular level Such processes are particularly conspicuous in species
living in constant darkness where for example in Astyanax all traits depending on the exposure to light like eyes
pigmentation visually triggered aggressive behaviour negative phototaxis and several peripheral outcomes of circadian
rhythmicity are useless and diminish In compensation constructive traits like taste olfaction or the lateral line senses are
improved by selection and do not show variability Regressive and constructive traits inherit independently proving that the
rudimentation process is not driven by pleiotropic linkage between them All these traits are subject to mosaic evolution and
exhibit unproportional epistatic gene effects which play an important role in evolutionary adaptation and improvement
Offering valuable evolutionary insights and supplemented by a wealth of illustrations this book will appeal to evolutionary
and developmental biologists alike Case reports in psychopharmacology Patricia Di Ciano,Matej Stuhlec,2024-02-06
