

A-Level Mechanics Year 1: Forces and Motion

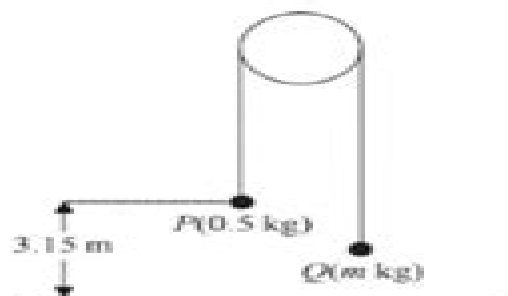

Mr. Goodier, March 2019 (updated July 2019)

Questions 1–6 due on

- 1** A car of mass 800 kg pulls a trailer of mass 200 kg along a straight horizontal road using a light towbar which is parallel to the road. The horizontal resistances to motion of the car and the trailer have magnitudes 400 N and 200 N respectively. The engine of the car produces a constant horizontal driving force on the car of magnitude 1200 N. Find
- (a) the acceleration of the car and trailer **(3)**
 - (b) the magnitude of the tension in the towbar **(3)**

The car is moving along the road when the driver sees a hazard ahead. He reduces the force produced by the engine to zero and applies the brakes. The brakes produce a force on the car of magnitude F newtons and the car and trailer decelerate. Given that the resistances to motion are unchanged and the magnitude of the thrust in the towbar is 100 N,

- (c) Find the value of F **(7)**
- 2** Two particles P and Q have mass 0.5 kg and m kg respectively, where $m < 0.5$. The particles are connected by a light inextensible string which passes over a smooth, fixed pulley. Initially P is 3.15 m above horizontal ground. The particles are released from rest with the string taut and the hanging parts of the string vertical, as shown in the figure below. After P has been descending for 1.5 s, it strikes the ground. Particle P reaches the ground before Q has reached the pulley.

- (a) Show that the acceleration of P as it descends is 2.8 ms^{-2} . **(3)**
- (b) Find the tension in the string as P descends. **(3)**
- (c) Show that $m = \frac{5}{18}$. **(4)**
- (d) State how you have used the information that the string is inextensible. **(1)**
