Introduction to Elliptic Curves and Modular Forms Neal I. Koblitz, 2012-12-06 This textbook covers the basic properties of elliptic curves and modular forms with emphasis on certain connections with number theory The ancient congruent number problem is the central motivating example for most of the book My purpose is to make the subject accessible to those who find it hard to read more advanced or more algebraically oriented treatments At the same time I want to introduce topics which are at the forefront of current research Down to earth examples are given in the text and exercises with the aim of making the material readable and interesting to mathematicians in fields far removed from the subject of the book With numerous exercises and answers included the textbook is also intended for graduate students who have completed the standard first year courses in real and complex analysis and algebra Such students would learn applications of techniques from those courses thereby solidifying their understanding of some basic tools used throughout mathematics Graduate students wanting to work in number theory or algebraic geometry would get a motivational example oriented introduction In addition advanced undergraduates could use the book for independent study projects senior theses and seminar work

Wallace, 2012-05-24 Keeping mathematical prerequisites to a minimum this undergraduate level text stimulates students intuitive understanding of topology while avoiding the more difficult subtleties and technicalities Its focus is the method of spherical modifications and the study of critical points of functions on manifolds No previous knowledge of topology is necessary for this text which offers introductory material regarding open and closed sets and continuous maps in the first chapter Succeeding chapters discuss the notions of differentiable manifolds and maps and explore one of the central topics of differential topology the theory of critical points of functions on a differentiable manifold Additional topics include an investigation of level manifolds corresponding to a given function and the concept of spherical modifications The text concludes with applications of previously discussed material to the classification problem of surfaces and guidance along with suggestions for further reading and study *The Practical Magazine*, 1873 *Journal of Horticulture and Practical Gardening*, 1872 *Advanced Mathematical Tools In Metrology* Iii Patrizia Ciarlini, Maurice G Cox, Franco Pavese, Caparica D Richter, 1997-08-05 This book is of interest to researchers in universities research centres and industries who are involved in measurements and need advanced mathematical tools to solve their problems and to whoever is working in the development of these mathematical tools Advances in metrology depend on improvements in scientific and technical knowledge and in instrumentation quality as well in a better use of

advanced mathematical tools and in the development of new ones In this book scientists from both the mathematical and the metrological fields exchange their experiences Industrial sectors such as instrumentation and software are likely to benefit from this exchange since metrology has a high impact on the overall quality of industrial products and applied mathematics is becoming more and more important in industrial processes

Lattices and Codes Wolfgang Ebeling, 2013 The purpose of coding theory is the design of efficient systems for the transmission of information The mathematical treatment leads to certain finite structures the error correcting codes Surprisingly problems which are interesting for the design of codes turn out to be closely related to problems studied partly earlier and independently in pure mathematics In this book examples of such connections are presented The relation between lattices studied in number theory and geometry and error correcting codes is discussed The book provides at the same time an introduction to the theory of integral lattices and modular forms and to coding theory In the 3rd edition again numerous corrections and improvements have been made and the text has been updated Content Lattices and Codes Theta Functions and Weight Enumerators Even Unimodular Lattices The Leech Lattice Lattices over Integers of Number Fields and Self Dual Codes Readership Graduate Students in Mathematics and Computer Science Mathematicians and Computer Scientists About the Author Prof Dr Wolfgang Ebeling Institute of Algebraic Geometry Leibniz Universität Hannover Germany
