Autonomous Control of Unmanned Aerial Vehicles Victor Becerra, 2019-06-24 Unmanned aerial vehicles UAVs are being increasingly used in different applications in both military and civilian domains These applications include surveillance reconnaissance remote sensing target acquisition border patrol infrastructure monitoring aerial imaging industrial inspection and emergency medical aid Vehicles that can be considered autonomous must be able to make decisions and react to events without direct intervention by humans Although some UAVs are able to perform increasingly complex autonomous manoeuvres most UAVs are not fully autonomous instead they are mostly operated remotely by humans To make UAVs fully autonomous many technological and algorithmic developments are still required For instance UAVs will need to improve their sensing of obstacles and subsequent avoidance This becomes particularly important as autonomous UAVs start to operate in civilian airspaces that are occupied by other aircraft The aim of this volume is to bring together the work of leading researchers and practitioners in the field of unmanned aerial vehicles with a common interest in their autonomy The contributions that are part of this volume present key challenges associated with the autonomous control of unmanned aerial vehicles and propose solution methodologies to address such challenges analyse the proposed methodologies and evaluate their performance Applications of Power Electronics Frede Blaabjerg, Tomislav Dragicevic, Pooya Davari, 2019-06-24
