job are more likely to trust their supervisors than those who report being subject to constant monitoring and a strict hierarchy. Managers who stand up for employees to media, government and other agency officials are particularly effective in cultivating the trust of their workers. And trust, the authors find, motivates superior job performance and commitment to the agency's mission. Employees who trust their supervisors report that they work harder, put in longer hours, and are less likely to break rules. The authors extend these findings to show that once supervisors gain trust, they enjoy greater latitude in influencing how employees allocate their time while working. Brehm and Gates show how these three executive roles are interrelated: training and protection for employees gives rise to trust, which provides supervisors with the leverage to stimulate improved performance among their workers. This new model, which frames supervisors as teachers and protectors instead of taskmasters, has widespread implications for training a new generation of leaders and creating more efficient organizations. Bureaucracies are notorious for inefficiency, but mid-level supervisors, who are often regarded as powerless, retain tremendous power to build a more productive workforce. *Teaching Tasks and Trust* provides a fascinating glimpse into a bureaucratic world operating below the radar of the public eye, a world we rarely see while waiting in line or filling out paperwork. A Volume in the Russell Sage Foundation Series on Trust. Cracking the AP, 2008. *Tutorials in Operations Research*. Institute for Operations Research and the Management Sciences. National Meeting, 2008. **Congressional Record**. United States Congress, 2008. Volume 2: Cases and Perspectives. M. Kathleen Heid, Glendon W. Blume, 2008-07-01. Published in Co-operation with the National Council of Teachers of Mathematics. According to NCTM's Principles and Standards for School Mathematics, Technology is essential in teaching and learning of mathematics; it influences the mathematics that is taught and it enhances students' learning. How does research inform this clarion call for technology in mathematics teaching and learning? In response to the need to craft appropriate roles for technology in school mathematics, new technological approaches have been applied to the teaching and learning of mathematics, and these approaches have been examined by researchers world-wide. The second volume has a dual focus: cases and perspectives. It features descriptive cases that provide accounts of the development of technology-intensive curriculum and tools. In these cases, the writers describe and analyze various roles that research played in their development work and ways in which research, curriculum development, and tool development can inform each other. These thoughtful descriptions and analyses provide documentation of how this process can and does occur. The remaining chapters in the second volume address research-related issues and perspectives on the use of technology in the teaching and learning of mathematics. The lessons learned from the research presented in these volumes are lessons about teaching and learning that can be applied more broadly than solely in technological settings. *Atlanta Magazine*, 2007-01.
