Chemical news and Journal of physical science, 1871 Assessment of Mars Science and Mission Priorities National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Planetary and Lunar Exploration, 2003-08-08 Within the Office of Space Science of the National Aeronautics and Space Administration NASA special importance is attached to exploration of the planet Mars because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made The failures in 1999 of two NASA missions Mars Climate Orbiter and Mars Polar Lander caused the space agency's program of Mars exploration to be systematically rethought both technologically and scientifically A new Mars Exploration Program plan summarized in

Appendix A was announced in October 2000 The Committee on Planetary and Lunar Exploration COMPLEX a standing committee of the Space Studies Board of the National Research Council was asked to examine the scientific content of this new program This goals of this report are the following Review the state of knowledge of the planet Mars with special emphasis on findings of the most recent Mars missions and related research activities Review the most important Mars research opportunities in the immediate future Review scientific priorities for the exploration of Mars identified by COMPLEX and other scientific advisory groups and their motivation and consider the degree to which recent discoveries suggest a reordering of priorities and Assess the congruence between NASA s evolving Mars Exploration Program plan and these recommended priorities and suggest any adjustments that might be warranted Geomorphology Robert S. Anderson,Suzanne P. Anderson,2010-06-17 This textbook provides a modern quantitative and process oriented approach to equip students with the tools to understand geomorphology Insight into the interpretation of landscapes is developed from basic principles and simple models and by stepping through the equations that capture the essence of the mechanics and chemistry of landscapes Boxed worked examples and real world applications bring the subject to life for students allowing them to apply the theory to their own experience The book covers cutting edge topics including the revolutionary cosmogenic nuclide dating methods and modeling highlights links to other Earth sciences through up to date summaries of current research and illustrates the importance of geomorphology in understanding environmental changes Setting up problems as a conservation of mass ice soil or heat this book arms students with tools to fully explore processes understand landscapes and to participate in this rapidly evolving field *Plutonium and the Other Transuranium Elements* United States. Environmental Protection Agency. Office of Radiation Programs,1975 **Decision Sciences** Angel A. Juan,Javier Faulin,David Lopez-Lopez,2025-01-30 This book constitutes the proceedings of the Second Decision Science Alliance International Summer Conference DSA ISC 2024 held in Valencia Spain in June 2024 The 33 full papers and 38 short papers included in this book were carefully reviewed and selected from 101 submissions At the core of DSA ISC 24 are in depth discussions and analyses across a spectrum of technological domains Notably experts shared their knowledge on areas such as Artificial Intelligence Machine Learning Mathematical Optimization Operational Research Management Science Statistics Simulation and Decision Processes Analysis Each of these areas represents a key aspect of decision science contributing to the interdisciplinary nature of the conference **Cosmogenic Radionuclides** Jürg Beer,Ken McCracken,Rudolf von Steiger,2012-01-19 Cosmogenic radionuclides are radioactive isotopes which are produced by natural processes and distributed within the Earth system With a holistic view of the environment the authors show in this book how cosmogenic radionuclides can be used to trace and to reconstruct the history of a large variety of processes They discuss the way in which cosmogenic radionuclides can assist in the quantification of complex processes in the present day environment The book aims to demonstrate to the reader the strength of analytic tools based on cosmogenic radionuclides their contribution to

almost any field of modern science and how these tools may assist in the solution of many present and future problems that we face here on Earth The book provides a comprehensive discussion of the basic principles behind the applications of cosmogenic and other radionuclides as environmental tracers and dating tools The second section of the book discusses in some detail the production of radionuclides by cosmic radiation their transport and distribution in the atmosphere and the hydrosphere their storage in natural archives and how they are measured The third section of the book presents a number of examples selected to illustrate typical tracer and dating applications in a number of different spheres atmosphere hydrosphere geosphere biosphere solar physics and astronomy At the same time the authors have outlined the limitations of the use of cosmogenic radionuclides Written on a level understandable by graduate students without specialist skills in physics or mathematics the book addresses a wide audience ranging from archaeology biophysics and geophysics to atmospheric physics hydrology astrophysics and space science
