Thermal Design of Electronic Equipment Ralph Remsburg, 2017-12-19 In a field where change and growth is inevitable new electronic packaging problems continually arise. Smaller more powerful devices are prone to overheating causing intermittent system failures, corrupted signals, lower MTBF and outright system failure. Since convection cooling is the heat transfer path most engineers take to deal with thermal problems, it is appropriate to gain as much understanding about the underlying mechanisms of fluid motion as possible. **Thermal Design of Electronic Equipment** is the only book that specifically targets the formulas used by electronic packaging and thermal engineers. It presents heat transfer equations dealing with polyalphaolephin, PAO, silicone oils, perfluorocarbons and silicate ester based liquids. Instead of relying on theoretical expressions and text explanations, the author presents empirical formulas and practical techniques that allow you to quickly solve nearly any thermal engineering problem in electronic packaging.

Microprocessors and Microcomputer-Based System Design Mohamed Rafiquzzaman, 2021-11-01 Microprocessors and Microcomputer Based System Design Second Edition builds on the concepts of the first edition. It discusses the basics of microprocessors, various 32 bit microprocessors, the 8085 microprocessor, the fundamentals of peripheral interfacing and Intel and Motorola microprocessors. This edition includes new topics such as floating point arithmetic, Program Array Logic and flash memories. It covers the popular Intel 80486, 80960 and Motorola 68040 as well as the Pentium and PowerPC microprocessors. The final chapter presents system design concepts applying the design principles covered in previous chapters to sample problems.
