

HONDA CR250R

**Great Suspension,
Lots of Power and
Watercooling.**

■ Most large motor cycle manufacturers have been experimenting with water-cooled 125cc motorcycles for a couple of years. Honda was first with a water 250 that was water-cooled last year. Since most successful racing designs eventually end up on production bikes, it wasn't a big surprise when one of the big four introduced water-cooled 125cc racers for 1981.

Honda's introduction of the 250 water-pumper was a surprise.

We got an opportunity to ride Honda's RC 250, the works water-cooled and reported in it in the November 1980 issue of *CW*. The RC 250 was an impressive machine with many hand-made aluminum parts. From the swing arm was constructed from aluminum pieces welded together. How similar is the production bike?

Visually the production CR250R is like a cousin. It looks much the same—only it's different. It's water-cooled, has single shock rear suspension, the radiator is mounted in front of the tank like the works bike, the frame is similar, and the basic geometry is the same.

Naturally the hand-made aluminum parts have given way to production pieces, some steel and some aluminum. The production parts aren't necessarily inferior, just heavier and less expensive to produce. After all, how many \$10,000 bikes could they sell? The race running on lightweight parts totals 29 lb. The RC weighed 214 lb with its 2.9 gal. aluminum tank half full of fuel; the CR250R sported our scales at 201 lb. with its 3.6 gal. plastic tank half full.

The CR250R engine is new. It isn't last year's engine with watercooling. The bore and stroke are the same as the RC's: 66 x 75mm. The air-cooled 90-mm bore 70 x 66-mm. The long stroke engine design is an attempt to make power output more usable. Short stroke designs usually cause more vibration than long stroke means. The rest of the crank assembly is also new. The flywheel weights are larger in diameter and slightly heavier than before, again for better power characteristics.

Other new engine parts amount to cylinder cases and transmission gears. The top-speed tranny is designed to make the most of the engine's power output. Primary power transmission is handled by a single cut gear. The magneto drives the
