Single answer at <http://apcentral.collegeboard.org>, 2008

1. 10

1) The amino acid sequence of cytochrome c is exactly the same in humans and chimpanzees. There is a difference of 13 amino acids between the cytochrome c of humans and dogs, and a difference of 28 amino acids between the cytochrome c of humans and cattle snakes. Which of the following is best supported by these data?

- a. Rattlesnakes apparently gave rise evolutionarily to the dog, chimpanzee, and human.
- b. Cytochrome c apparently has an entirely different function in rattlesnakes than in mammals, which explains the difference in the number of amino acids.
- c. Cytochrome c is not found universally in animals.
- d. Cytochrome c from a rattlesnake could function in a dog, but not in a chimpanzee.
- e. The human is apparently more closely related to the chimpanzee than to the dog or rattlesnake.

2. 10

2) A parasite may be described as an organism that derives nourishment from another living organism and is therefore necessary to the life of the host.

- a. benefits the host nutritionally
- b. provides a supportive structure for the host
- c. harms the host in the process

3. 10

3) Countercurrent exchange in the gills of fish is an adaptation that accomplishes which of the following?

- a. it limits the amount of blood going to the gills.
- b. it decreases the thermal gradient between water and blood.
- c. it improves the ability of blood to dissolve oxygen.
- d. it maximizes oxygen transfer from water to the blood.
- e. it maximizes heat retention in the fish.

4. 10

4) The energy required to run the Calvin cycle reactions of photosynthesis comes from which two substances produced during the light-dependent reactions?

- a. ATP and NADPH
- b. ADP and PCH

Molecular Biology Nancy Craig, Rachel Green, Orna Cohen-Fix, Carol Greider, Gisela Storz, Cynthia Wolberger, 2014-05 The biological world operates on a multitude of scales from molecules to tissues to organisms to ecosystems. Throughout these myriad levels runs a common thread: the communication and onward passage of information from cell to cell, from organism to organism and ultimately from generation to generation. But how does this information come alive to govern the processes that constitute life? The answer lies in the molecular components that cooperate through a series of carefully regulated processes to bring the information in our genome to life. These components and processes lie at the heart of one of the most fascinating subjects to engage the minds of scientists today: molecular biology. **Molecular Biology: Principles of Genome Function**, Second Edition offers a fresh approach to the teaching of molecular biology by focusing on the commonalities that exist between the three kingdoms of life and discussing the differences between the three kingdoms to offer instructive insights into molecular processes and components. This gives students an accurate depiction of our current understanding of the conserved nature of molecular biology and the differences that underpin biological diversity. Additionally, an integrated approach demonstrates how certain molecular phenomena have diverse impacts on genome function by presenting them as themes that recur throughout the book rather than as artificially separated topics. As an experimental science, molecular biology requires an appreciation for the approaches taken to yield the information from which concepts and principles are deduced. Experimental Approach panels throughout the text describe research that has been particularly valuable in elucidating difference aspects of molecular biology. Each panel is carefully cross referenced to the discussion of key molecular biology tools and techniques which are presented in a dedicated chapter.

at the end of the book Molecular Biology further enriches the learning experience with full color artwork end of chapter questions and summaries suggested further readings grouped by topic and an extensive glossary of key terms Features A focus on the underlying principles of molecular biology equips students with a robust conceptual framework on which to build their knowledge An emphasis on their commonalities reflects the processes and components that exist between bacteria archae and eukaryotes Experimental Approach panels demonstrate the importance of experimental evidence by describing research that has been particularly valuable in the field

Avian Urban Ecology Diego Gil, Henrik Brumm, 2014 This edited volume adopts an evolutionary framework to explore how pre existing differences in life history behaviour and physiology of birds may determine the course of their adaptation to urban habitats

Relentless Evolution John N. Thompson, 2022-12-22 At a glance most species seem adapted to the environment in which they live Yet species relentlessly evolve and populations within species evolve in different ways Evolution as it turns out is much more dynamic than biologists realized just a few decades ago In Relentless Evolution John N Thompson explores why adaptive evolution never ceases and why natural selection acts on species in so many different ways Thompson presents a view of life in which ongoing evolution

is essential and inevitable Each chapter focuses on one of the major problems in adaptive evolution How fast is evolution How strong is natural selection How do species co opt the genomes of other species as they adapt Why does adaptive evolution sometimes lead to more rather than less genetic variation within populations How does the process of adaptation drive the evolution of new species How does coevolution among species continually reshape the web of life And more generally how are our views of adaptive evolution changing Relentless Evolution draws on studies of all the major forms of life from microbes that evolve in microcosms within a few weeks to plants and animals that sometimes evolve in detectable ways within a few decades It shows evolution not as a slow and stately process but rather as a continual and sometimes frenetic process that favors yet more evolutionary change

Animal Signaling and Function Duncan J. Irschick, Mark Briffa, Jeffrey Podos, 2015-01-20 The diversity of animal signals has been widely documented and the generality of animal signals also tantalizingly suggests that there are common mechanisms that have selected for their origin However while much progress has been made on some fronts we still lack a general theory about why the diversity of signaling structures exist Our compilation will directly address this gap by focusing on an exciting new arena of sexual selection namely using functional approaches to understand signaling This approach is rooted in the idea that many signals are designed to transmit important functional information that is both important for issues of male quality and hence male competition and female choice The increasing use of technology in sexual selection studies has enabled researchers to test whether signaling is either constrained by or accurately transmits information about functional capacities Further in animals that fight vigorously functional capacities such as endurance or strength may make the difference between winning and losing This volume brings together a diverse collection of researchers who are actively investigating how function and signaling are related These researchers use both a variety of methods and taxa to study animal signaling and we believe that this integrative view is important to open up fresh vistas for why animal signals have evolved

Evolvability Thomas F. Hansen, David Houle, Mihaela Pavlicev, Christophe Pélabon, 2023-06-27 Essays on evolvability from the perspectives of quantitative and population genetics evolutionary developmental biology systems biology macroevolution and the philosophy of science Evolvability the capability of organisms to evolve wasn't recognized as a fundamental concept in evolutionary theory until 1990 Though there is still some debate as to whether it represents a truly new concept the essays in this volume emphasize its value in enabling new research programs and facilitating communication among the major disciplines in evolutionary biology The contributors many of whom were instrumental in the development of the concept of evolvability synthesize what we have learned about it over the past thirty years They focus on the historical and philosophical contexts that influenced the emergence of the concept and suggest ways to develop a common language and theory to drive further evolvability research The essays drawn from a workshop on evolvability hosted in 2019 2020 by the Center of Advanced Study at the Norwegian Academy of Science and Letters in Oslo provide scientific and historical background on evolvability The contributors

represent different disciplines of evolutionary biology including quantitative and population genetics evolutionary developmental biology systems biology and macroevolution as well as the philosophy of science This plurality of approaches allows researchers in disciplines as diverse as developmental biology molecular biology and systems biology to communicate with those working in mainstream evolutionary biology The contributors also discuss key questions at the forefront of research on evolvability Contributors J David Aponte W Scott Armbruster Geir H Bolstad Salom Bourg Ingo Brigandt Anne Calof James M Cheverud Josselin Clo Frietson Galis Mark Grabowski Rebecca Green Benedikt Hallgr msson Thomas F Hansen Agnes Holstad David Houle David Jablonski Arthur Lander Arnaud LeRouzic Alan C Love Ralph Marcucio Michael B Morrissey Laura Nu o de la Rosa ystein H Opedal Mihaela Pavli ev Christophe P labon Jane M Reid Heather Richbourg Jacqueline L Sztepanacz Masahito Tsuboi Cristina Villegas Marta Vidal Garc a Kjetil L Voje Andreas Wagner G nter P Wagner Nathan M Young
