Neo-Simulation and Gaming Toward Active Learning Ryoju Hamada, Songsri Soranastaporn, Hidehiko Kanegae, Pongchai Dumrongrojwathana, Settachai Chaisanit, Paola Rizzi, Vinod Dumblekar, 2019-10-08 This book provides tips to teachers for moving toward active learning by using simulation and gaming. The book is a rare reference for teachers who wish to initiate active learning by applying many real experiences from world experts in simulation and gaming. This cumulative wisdom comes from cutting-edge trials reported at the 49th International Simulation and Gaming Association's annual conference in Thailand, 9-13 July 2018. The importance of changing teachers' one-way lecture approach to that of active learning has been commonly understood for several decades and has been promoted especially in recent years in Asian universities. Simulation and gaming meets the requirements of such teaching programs especially for active learning, but there are few books or references on how to gamify a lecture. This book serves as a guide to facilitate that change. The author recognizes the duty to provide readers with fixed directions toward simulation and gaming in the next generation, which have still not been fully elucidated. Developing a simulation and gaming culture and making it sustainable in the next decade are the purpose of this book. *Innovation, Communication and Engineering* Teen-Hang Meen, Stephen Prior, Art de Donald Kin-Tak Lam, 2013-10-08 This volume represents the proceedings of the 2013 International Conference on Innovation, Communication and Engineering (ICICE 2013). Evaluating the flow regulating effects of ecosystems in the Mekong and Volta river basins Lacombe, Guillaume, McCartney, Matthew, 2016-12-04 By altering evapotranspiration and influencing how water is routed and stored in a basin natural and agrarian ecosystems affect river flow To quantify the impact of ecosystems on streamflow in two large river basins in Asia and Africa simple statistical relationships were calculated enabling flow characteristics to be ascertained from basic catchment features This approach allows the impact of specified land use change on streamflow to be determined For example it shows that extending paddy areas in the Mekong River Basin reduces downstream low flows while conversion of forests to crops increases the magnitude of downstream floods in the Volta River Basin The approach could assist river basin planners to better account for flow related ecosystem services
