Lambe, 2012-12-06 A symposium seems an appropriate vehicle to review recent as well as new data on important topics It is therefore our goal to present a symposium on selected topics of importance every three years Some topics will be updated and new topics will be presented A vast amount of information has been accumulated over the past ten years on the significance of anaerobic bacteria in infectious diseases This symposium was organized to discuss laboratory aspects normal flora pathogenicity serology and the patient's immune response to anaerobic infection Important information on the patient's immune response and serology of anaerobes which has accumulated over the last few years made these topics an important part of the symposium Development of serological diagnostic tests undoubtedly will provide quicker and less expensive identification of certain anaerobic species in the future Utilization of the patient's immune response to anaerobic septicemia has the potential of providing a diagnosis of the causative agent within 24 hours after onset of symptoms The development of such diagnostic methods and the use of these methods in the clinical laboratory in the future would provide rapid diagnostic information to the clinician on these life threatening infections Campylobacter was included in the symposium to emphasize the important role of this organism in human acute gastroenteritis The pathogenesis of Campylobacter in gastroenteritis has been recognized in certain European countries since 1972 although we have recognized the importance of Campylobacter gastroenteritis in the United States only within the past two years      *Bailey & Scott's Diagnostic Microbiology - E-BOOK* Patricia M. Starr, H. Stolp, H.G. Trüper, A. Balows, H.G. Schlegel, 2013-11-11 The purpose of this brief Foreword is to make you the reader hungry for the scientific feast that follows

These two volumes on the prokaryotes offer a truly unique scientific menu a comprehensive assembly of articles exhibiting the biochemical depth and remarkable physiological and morphological diversity of prokaryote life The size of the volumes might initially discourage the unprepared mind from being attracted to the study of prokaryote life for this landmark assemblage thoroughly documents the wealth of present knowledge But in confronting the reader with the state of the art the Handbook also defines where new work needs to be done on well studied bacteria as well as on unusual or poorly studied organisms There are basically two ways of doing research with microbes A classical approach is first to define the phenomenon to be studied and then to select the organism accordingly Another way is to choose a specific organism and go where it leads The pursuit of an unusual microbe brings out the latent hunter in all of us The intellectual challenges of the chase frequently test our ingenuity to the limit Sometimes the quarry repeatedly escapes but the final capture is indeed a wonderful experience For many of us these simple rewards are sufficiently gratifying so that we have chosen to spend our scientific lives studying these unusual creatures

Thomas, H.J. Over, U. Vecht, P. Nansen, 2012-12-06 This Community meeting has been organised since over the past 15 years in different countries of Western Europe including Scandinavia a lot of research has been directed to the summer mastitis problem Summer mastitis in cattle is a well known disease which because of its abruptness and the difficulties concerned in defining the predisposing factors and the pathogens involved is hard to control Moreover as it is anticipated that in the transmission of the bacteria one or more dipterans are involved the complexity in defining the disease and hence co ordinating our scientific knowledge in relation to practical control was stimulus enough for this workshop to be organised Our aims can be summarised in the following goals 1 Exchange of information in the practical technical and scientific field in order to stimulate a co ordinated research approach at a time in which the cattle husbandry sector is under great economical stress 2

Inform research workers from countries where the disease is or seems to be not endemic on aspects that might be of interest for them in the approach of comparable problems 3 To draw up conclusions and recommendations with regard to future research activities in order to avoid needless duplication of effort
