

THE SKELETON
The skeleton is the framework of the body, supporting the soft organs and tissues. It is composed of bones and cartilage. The bones are made of a hard, white, mineralized tissue called bone. The cartilage is a soft, white, fibrous tissue. The skeleton is divided into the axial skeleton (skull, spine, and rib cage) and the appendicular skeleton (arms and legs). The axial skeleton is made of 28 bones, and the appendicular skeleton is made of 126 bones. The total number of bones in the human body is 206.

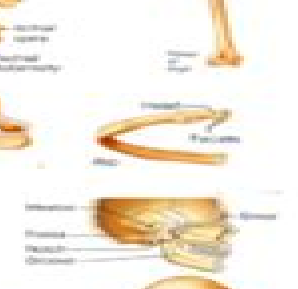

BONE STRUCTURE
Bones are made of a hard, white, mineralized tissue called bone. The bone is composed of a central shaft called the diaphysis and two ends called the epiphyses. The diaphysis is made of compact bone, and the epiphyses are made of spongy bone. The bone is covered by a thin layer of tissue called the periosteum. The bone is also covered by a layer of tissue called the endosteum.

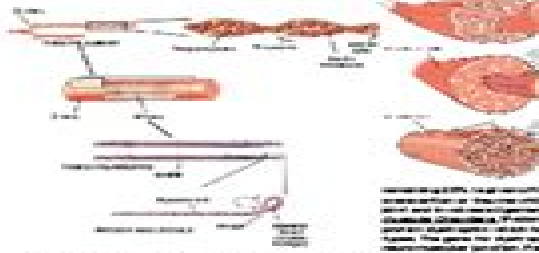

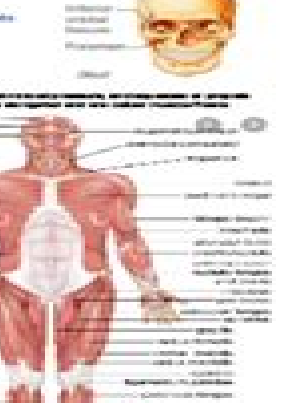

BONE DEVELOPMENT
Bones develop from a mass of undifferentiated cells called a blastema. The blastema is made of cells that are capable of becoming any type of cell in the body. The blastema is first formed in the embryo, and then it grows into the adult bone. The bone is made of a hard, white, mineralized tissue called bone. The bone is composed of a central shaft called the diaphysis and two ends called the epiphyses.

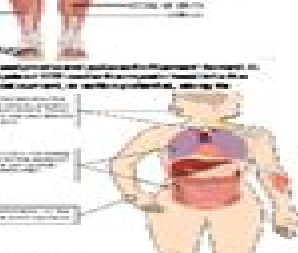

BONE GROWTH
Bones grow in length and width. The growth in length is called longitudinal growth, and the growth in width is called appositional growth. Longitudinal growth is controlled by the growth plates, which are made of cartilage. Appositional growth is controlled by the periosteum, which is the outer layer of the bone. The bone is made of a hard, white, mineralized tissue called bone. The bone is composed of a central shaft called the diaphysis and two ends called the epiphyses.

MUSCLE STRUCTURE
Muscles are made of a soft, pink, fibrous tissue called muscle. The muscle is composed of a central shaft called the myofibril and two ends called the sarcomeres. The myofibril is made of actin and myosin filaments. The sarcomere is the basic unit of muscle contraction. The muscle is covered by a thin layer of tissue called the sarcolemma. The muscle is also covered by a layer of tissue called the endomysium.

MUSCLE GROWTH
Muscles grow in size and strength. The growth in size is called hypertrophy, and the growth in strength is called hyperplasia. Hypertrophy is controlled by the growth plates, which are made of cartilage. Hyperplasia is controlled by the periosteum, which is the outer layer of the muscle. The muscle is made of a soft, pink, fibrous tissue called muscle. The muscle is composed of a central shaft called the myofibril and two ends called the sarcomeres.
