Gillard,2022-01-06 Why do many popular songs positively reference God if our culture is widely viewed as secular Why is it a challenge to tell the Christian story when many say they are spiritual and believe in God Why do we draw so much meaning from the popular songs we listen to And might a deeper understanding of popular music culture help us to explore the bigger stories we listen to throughout our lives such as the Christian story Primarily using Zygmunt Bauman s understanding of liquid modernity we look at the social forces that shape Western society and consider why while many are looking for authentic ontologically based stories to understand their life experiences historic providers of the big stories that shape our lives such as the church favor a different epistemological way of telling them How do these different approaches to storytelling affect their reception and what insight might we draw from that Whilst this book is written primarily with those in Christian ministry in mind it will be of interest too to those who use music to explore life experiences through their work who are interested in the social forces that shape society or who simply enjoy listening to popular music **The Power of**

Aging Mechanisms and Intervention Efficacy Christos Frantzidis,Ana B. Vivas,Panagiotis D. Bamidis,2020-11-18 Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain The most prominent anatomical alteration are changes in prefrontal cortex morphology volume loss and reduced white matter integrity and hippocampal atrophy Cognitive decline affects mainly the performance of episodic memory speed of sensory information processing working memory inhibitory function and long term memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this case information flow is disrupted due to neurodegeneration

functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease

Conscious Mind, Resonant Brain Stephen Grossberg, 2021 How does your mind work How does your brain give rise to your mind These are questions that all of us have wondered about at some point in our lives if only because everything that we know is experienced in our minds They are also very hard questions to answer After all how can a mind understand itself How can you understand something as complex as the tool that is being used to understand it This book provides an introductory and self contained description of some of the exciting answers to these questions that modern theories of mind and brain have recently proposed Stephen Grossberg is broadly acknowledged to be the most important pioneer and current research leader who has for the past 50 years modelled how brains give rise to minds notably how neural circuits in multiple

brain regions interact together to generate psychological functions This research has led to a unified understanding of how where and why our brains can consciously see hear feel and know about the world and effectively plan and act within it The work embodies revolutionary Principia of Mind that clarify how autonomous adaptive intelligence is achieved It provides mechanistic explanations of multiple mental disorders including symptoms of Alzheimer s disease autism amnesia and sleep disorders biological bases of morality and religion including why our brains are biased towards the good so that values are not purely relative perplexing aspects of the human condition including why many decisions are irrational and self defeating despite evolution s selection of adaptive behaviors and solutions to large scale problems in machine learning technology and Artificial Intelligence that provide a blueprint for autonomously intelligent algorithms and robots Because brains embody a universal developmental code unifying insights also emerge about shared laws that are found in all living cellular tissues from the most primitive to the most advanced notably how the laws governing networks of interacting cells support developmental and learning processes in all species The fundamental brain design principles of complementarity uncertainty and resonance that Grossberg has discovered also reflect laws of the physical world with which our brains ceaselessly interact and which enable our brains to incrementally learn to understand those laws thereby enabling humans to understand the world scientifically Accessibly written and lavishly illustrated Conscious Mind Resonant Brain is the magnum opus of one of the most influential scientists of the past 50 years and will appeal to a broad readership across the sciences and humanities

Sight as Site in the Digital Age Kwok-kan Tam, 2023-12-30 This volume presents a broad coverage of theoretical issues that deal with digital culture representation and ideology in art and

museums and other cultural sites offering new insights into issues of representation in the digitization of art. It critically examines the roles of museum and archives in the digital age and reexamines the intricate relations between sight and site in art museums, exhibitions, theme parks, theatre performances, music videos and films. The collection represents a multidisciplinary approach to the complex issues underlying the advent of technologies and digital culture. The rise of visual culture since the twentieth century can be accounted for by the advent of technology in film, TV, museum exhibitions and the wide use of websites, but it can also be understood as a paradigmatic shift toward representation as a visual means to interpret culture with new understandings of the site/sight dilemma and the co-implications in related tensions. Complicating the issue of representation is the rise of digital culture as digital sites replace actual physical sites. This book explores how the virtual has replaced the actual and in what ways and to what effects the digital has displaced the physical. With contributions by museum curators, communications scholars, visual artists, theatre artists, filmmakers, literary critics and historians, this volume is of appeal to academics and graduate students in information science, art, media, performance, literary and cultural studies and history. The book binds together different concepts such as site/sight and digitalization in a very original way. It convincingly gathers contributions from academics and practitioners, artists and museum specialists. The chapters are theoretically well founded, show an interesting breadth of content and are also dealing with current developments. Monika G. Nussbauer, Professor of Chinese and Head of the Institute of Asian, Middle Eastern and Turkish Studies, Stockholm University, Sweden. The chapters raise important and latest questions and discussions on the impact of digital technology has on art, culture, creativity, representation and innovation. They are original in dealing with latest examples in recent years, especially during the pandemic, with reflections and philosophical discussions on the transformation digital culture undergoes in relation to human and posthuman contexts, with examinations of art works, archives and museum collections, exhibitions, theme parks, theatre performances, films and music videos that encompass cultures from ancient to contemporary, from the West to the East and from physical to digital.
