Gross anatomy of brain and cranial nerves has been covered with a view for the greater understanding of the anatomy of head and neck and its importance in clinical application. Gross anatomy of thorax and abdomen has been dealt with in a manner which will facilitate physical examination of a medial or surgical case when the students are taught general medicine and surgery and should have a knowledge of the viscera in the chest or abdomen. Anatomy of the extremities described gives an idea of the construction of the limbs in general and covers the anatomy of the whole body. Fundamentals of medical genetics are dealt with so that the student can understand the genetic basis of diseases. General principles of anthropology are briefly covered to make the student appreciate that anatomy is the foundation not only of medicine but also of man's physical and cultural development.
