 describes the role of military engineers especially the U S Army Corps of Engineers in the Vietnam War It is a story of the
 engineers battle against an elusive and determined enemy in one of the harshest underdeveloped regions of the world
 Despite these challenges engineer soldiers successfully carried out their combat and construction missions The building
 effort in South Vietnam allowed the United States to deploy and operate a modern 500 000 man force in a far off region
 Although the engineers faced huge construction tasks they were always ready to support the combat troops They built ports
 and depots carved airfields and airstrips out of jungle and mountain plateaus repaired roads and bridges and constructed
 bases Because of these efforts ground combat troops with their supporting engineers were able to fight the enemy from well
 established bases Although most of the construction was temporary more durable facilities such as airfields port and depot
 complexes headquarters buildings communications facilities and an improved highway system were intended to serve as
 economic assets for South Vietnam This volume covers how the engineers grew from a few advisory detachments to a force
 of more than 10 percent of the Army troops serving in South Vietnam The 35th Engineer Group began arriving in large
 numbers in June 1965 to begin transforming Cam Ranh Bay into a major port airfield and depot complex Within a few years
 the Army engineers had expanded to a command two brigades six groups twenty eight construction and combat battalions
