climate crisis is humanmade Its main cause is the burning of fossil fuels To combat climate change we have to understand how we arrived at where we are This book explores the reasons why human societies have embarked on the trajectory of ever increasing use of fossil fuels Population growth desire for freedom from want and profit seeking all played major roles in shaping human history but there has been no inevitable drive towards heating up the atmosphere in the pursuit of social objectives To sustain a growing population more natural resources are required but their use does not need to generate climate change No logic of modernity links freedom with a kind of material abundance that requires the burning of fossil fuels No logic of capital necessarily ties the search for profit to the extraction of fossil resources Examining the critical junctures in human history when resource regimes changed this book identifies the social problems that were meant to be solved by burning fossil fuels and the power hierarchies that shaped the decisions to use them Wagner argues that the key choices that led to the climate emergency were made relatively recently during the second half of the 20th century they are close enough in time for us to undo the prevailing social logic of fossil fuels By redefining the key problems that humankind is facing and reshaping the existing mechanisms of power we can take the decisive action needed to reduce our dependence on fossil fuels and avert the worst consequences of climate change

Performance Cultures and Doped Bodies Jesper Andreasson, April

Henning, 2021-06-30 Why has doping both as a practice and a social phenomenon been approached largely as a question of context sport or fitness Individuals may use substances to enhance sporting performance or within the framework of gym and fitness culture to create a perfect body But clearly people who dope are not bound to a singular context It is quite the opposite as individuals weave between and move across various settings in their trajectories to and from doping as goals identities ambitions and lifestyles change over time Still these stark categorizations often made in public discourse and

reinforced by scholars have continued to ignore these lived experiences and limited our understanding of doping Building on data gathered through ethnographic fieldwork studies of online doping communities and in depth case studies this book embraces the challenge of moving beyond traditional and historical doping dichotomies such as those of sport or fitness online or offline pleasure or harm masculinity or femininity and health or harm and in a sociologically informed analysis it develops new terminology to understand trajectories to and from doping It argues there are multiple ways to understand doped bodies and doping practices and that we must approach these questions from the perspective of both and rather than either or By imploding these divisions it offers updated and nuanced ways of both empirically and theoretically rethinking doping use and experiences attached to the practice Routledge Handbook of Environmental Anthropology Helen Kopnina,Eleanor Shoreman-Ouimet,2016-08-12 Environmental Anthropology studies historic and present human environment interactions This volume illustrates the ways in which today s environmental anthropologists are constructing new paradigms for understanding the multiplicity of players pressures and ecologies in every environment and the value of cultural knowledge of landscapes This Handbook provides a comprehensive survey of contemporary topics in environmental anthropology and thorough discussions on the current state and prospective future of the field in seven key sections As the contributions to this Handbook demonstrate the subfield of environmental anthropology is responding to cultural adaptations and responses to environmental changes in multiple and complex ways As a discipline concerned primarily with human environment interaction environmental anthropologists recognize that we are now working within a pressure cooker of rapid environmental damage that is forcing behavioural and often cultural changes around the world As we see in the breadth of topics presented in this volume these environmental challenges have inspired renewed foci on traditional topics such as food procurement ethnobiology and spiritual ecology and a broad new range of subjects such as resilience nonhuman rights architectural anthropology industrialism and education This volume enables scholars and students quick access to both established and trending environmental anthropological explorations into theory methodology and practice **The Wardian Case** Luke Keogh,2023-01-05 In 1829 surgeon and amateur naturalist Nathaniel Bagshaw Ward discovered that plants enclosed in airtight glass cases could survive for long periods without watering After four years of growing plants under glass in his London home Ward created traveling glazed cases that he hoped would be able to transport plants around the world After a test run from London to Sydney Ward was proven correct and the Wardian case was born It is easy to forget in our technologically advanced and globalized world but prior to the invention of the case it was extremely difficult to transfer plants around the globe as they often died from mishandling cold weather or salt from the ocean In this enthralling book Luke Keogh takes us around the world and through history with the Wardian case He shows that this revolution in the movement of plants transformed the world impacting the commercial nursery trade late nineteenth century imperialism and the global environment The repercussions of this revolution are still with us today *History and the Climate Crisis* Kate
