The Plasma Membrane

--the fluid mosaic model (S.J Singer)
-- semi-permeable
--fluid portion is a double layer of phospholipids, called the phospholipid bilayer

Jobs of the cell membrane

- Isolate the cytoplasm from the external environment
- Regulate the exchange of substances
- Communicate with other cells
- Identification

The Plasma Membrane is also called the **Phospholipid bilayer**

Phospholipids contain a hydrophilic head and a nonpolar hydrophobic tail

Hydrogen bonds form between the phospholipid "heads" and the watery environment inside and outside of the cell

Hydrophobic interactions force the "tails" to face inward

Phospholipids are not bonded to each other, which makes the double layer fluid

Cholesterol embedded in the membrane makes it stronger and less fluid
