Metaphysics of Consciousness William Seager, 2002-09-11 Metaphysics of Consciousness opens with a development of the physicalist outlook that denies the need for any explanation of the mental This inexplicability is demonstrated not to be sufficient as refutation of physicalism However the inescapable particularity of modes of consciousness appears to overpower this minimal physicalism This book proposes that such an inference requires either a wholly new conception of how consciousness is physical or a deep and disturbing new kind of physical inexplicability

in recent decades Manfred Velden shows that this idea is illusory on fundamental and a priori grounds Several fields of inquiry are described where the biologicistic project has demonstrably failed like for example heritability estimates for mental traits like intelligence It is argued as well that biologism is just a further instance of an older more comprehensive and equally illusory concept psychology as a natural science a science that produces generally accepted basic facts for example the creation of a psychological risk factor for coronary disease It is shown that psychology masquerading as a natural science as it largely does may create serious societal problems like for example its misuse for racist purposes The peculiar use of methodology in psychology is also documented *Psychology* ,1932
