Monitoring the Quality of Education in Schools Vanessa Scherman, Roel J. Bosker, Sarah J. Howie, 2016-12-27 The monitoring of quality has been part of the educational landscape for many decades Originally the need to monitor arose as part of an economic process whereby policy makers wanted to discern the return on investment in education This bottom line thinking while still prominent has receded into the background in light of global changes and the emergence of a global economy Now in addition to the question what is the return on investment the more important question is are the students in schools ready to participate in the economy of a 21st century society This is underpinned by the inquiry into what knowledge and competencies are required for students to participate meaningfully in nation building This inquiry can only be undertaken by means of monitoring evaluating where the students are and what is required so that students reach their potential In an ever changing technologically oriented world the manner in which competencies and knowledge are identified and how these need to be measured and identified is important In this book the theory and practice of underpinning the monitoring of the quality of education is described This is followed by a number of practical examples in the form of country case studies on how theory plays out in practice The book further provides common themes across developed and developing emerging economies underscoring the need for approaches which are locally relevant but internationally transferable

Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 *Research for Educational Change* presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking

to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research International Handbook of Teacher Education John Loughran, Mary Lynn Hamilton, 2016-05-04
