

THE SKELETON
The skeleton is the framework of the body, supporting the soft organs and tissues. It is composed of bones and cartilage. The bones are made of a hard, white, mineralized substance called bone tissue. The cartilage is a soft, flexible tissue that connects the bones to each other and to the other parts of the body. The skeleton is divided into the axial skeleton (skull, spine, and rib cage) and the appendicular skeleton (arms and legs).

THE MUSCLES
The muscles are the soft tissue that contracts to move the bones. They are made of muscle fibers that are long and thin. The muscles are attached to the bones by tendons. The muscles are divided into the skeletal muscles (voluntary) and the smooth muscles (involuntary).

THE JOINTS
The joints are the points where two or more bones meet. They allow the bones to move relative to each other. There are three main types of joints: ball-and-socket joints, hinge joints, and pivot joints.

THE HEART
The heart is the organ that pumps blood throughout the body. It is made of muscle and is divided into four chambers: the right atrium, right ventricle, left atrium, and left ventricle. The heart is located in the chest cavity, between the lungs.

THE LUNGS
The lungs are the organs that take in oxygen from the air and release carbon dioxide. They are located in the chest cavity, on either side of the heart. The lungs are made of a soft, spongy tissue that is covered by a thin layer of membrane.

THE NERVOUS SYSTEM
The nervous system is the system that controls the body's movements and functions. It is made of neurons that transmit electrical signals. The nervous system is divided into the central nervous system (brain and spine) and the peripheral nervous system (nerves).
