Medical Image Computing and Computer-Assisted Intervention -- MICCAI 2004 Christian Barillot, David R. Haynor, Joao Falcao e Cunha, Pierre Hellier, 2004-09-17

The 7th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI 2004 was held in Saint Malo Brittany France at the Palais du Grand Large conference center September 26-29 2004. The proceedings host MICCAI 2004 was strongly encouraged and supported by IRISA. Rennes IRISA is a publicly funded national research laboratory with a staff of 370 including 150 full time research scientists, 10 teaching research scientists and 115 postgraduate students. INRIA, the CNRS and the University of Rennes 1 are all partners in this mixed research unit and all three organizations were helpful in supporting MICCAI. MICCAI has become a premier international conference with in-depth perspectives on the multidisciplinary fields of medical image computing, computer assisted intervention and medical robotics. The conference brings together clinicians, biological scientists, computer scientists, engineers, physicists and other researchers and offers them a forum to exchange ideas in these exciting and rapidly growing fields. The impact of MICCAI increases each year and the quality and quantity of submitted papers this year was very impressive. We received a record 516 full submissions (8 pages in length) and 101 short communications (2 pages) from 36 different countries and 5 continents (see figures below). All submissions were reviewed by up to 4 external reviewers from the Scientific Review Committee and a primary reviewer from the Program Committee. All reviews were then considered by the MICCAI 2004 Program Committee resulting in the acceptance of 235 full papers and 33 short communications.

Brain Mapping: The Disorders John C. Mazziotta, Arthur W. Toga, Richard S.J. Frackowiak, 2000-05-24

Brain Mapping: The Disorders is the first comprehensive text to describe the uses of the latest brain mapping technologies in the evaluation of patients with neurological, neurosurgical and psychiatric disorders. With contributions from the leading figures in the field, this heavily illustrated text is organized by disorders of brain systems with specific examples of how one should use current neuroimaging techniques to evaluate patients with specific cerebral disorders. Comprehensive in scope, the text discusses patient evaluations using the wide range of modern magnetic resonance imaging techniques, positron emission tomography, single photon emission computed tomography, optical intrinsic signal imaging, electroencephalography, magnetoencephalography and transcranial magnetic stimulation. The third in this brain mapping series, *Brain Mapping: The Disorders* is the ultimate text for anyone interested in the use of brain mapping techniques to study patients with disorders of the central nervous system. Provides a comprehensive in-depth view of the current brain mapping techniques as they are used in the evaluation of patients with cerebral disorders. Heavily illustrated to provide actual examples of the use of the specific techniques. Includes contributions from the leaders in the field, ensuring authoritative and up-to-date material. Completes the

trilogy of three brain mapping texts dealing respectively with the methods the applications of these methods in the normal brain and in patients with neurological neurosurgical and psychiatric disorders **Applications of NDT Data Fusion** Xavier E. Gros,2013-11-27 Non destructive testing NDT systems can generate incomplete incorrect or conflicting information about a flaw or a defect Therefore the use of more than one NDT system is usually required for accurate defect detection and or quantification In addition to a reduction in inspection time important cost savings could be achieved if a data fusion process is developed to combine signals from multisensor systems for manual and remotely operated inspections This gathering of data from multiple sources and an efficient processing of information help in decision making reduce signal uncertainty and increase the overall performance of a non destructive examination This book gathers for the first time essays from leading NDT experts involved in data fusion It explores the concept of data fusion by providing a comprehensive review and analysis of the applications of NDT data fusion This publication concentrates on NDT data fusion for industrial applications and highlights progress and applications in the field of data fusion in areas ranging from materials testing in the aerospace industry to medical applications Each chapter contains a specific case study with a theoretical part but also presents experimental results from a practical point of view The book should be considered more as a pragmatic introduction to the applications of NDT data fusion rather than a rigorous basis for theoretical studies **Biomedical Informatics** Edward H. Shortliffe,James J. Cimino,2006-12-02 This book focuses on the role of computers in the provision of medical services It provides both a conceptual framework and a practical approach for the implementation and management of IT used to improve the delivery of health care Inspired by a Stanford University training program it fills the need for a high quality text in computers and medicine It meets the growing demand by practitioners researchers and students for a comprehensive introduction to key topics in the field Completely revised and expanded this work includes several new chapters filled with brand new material *Baby's First Picture* Lisa Meryn Mitchell,2001-01-01 Mitchell argues what is seen through ultrasound is neither self evident nor natural but historically and culturally contingent and subject to a wide range of interpretation
