

Meiosis

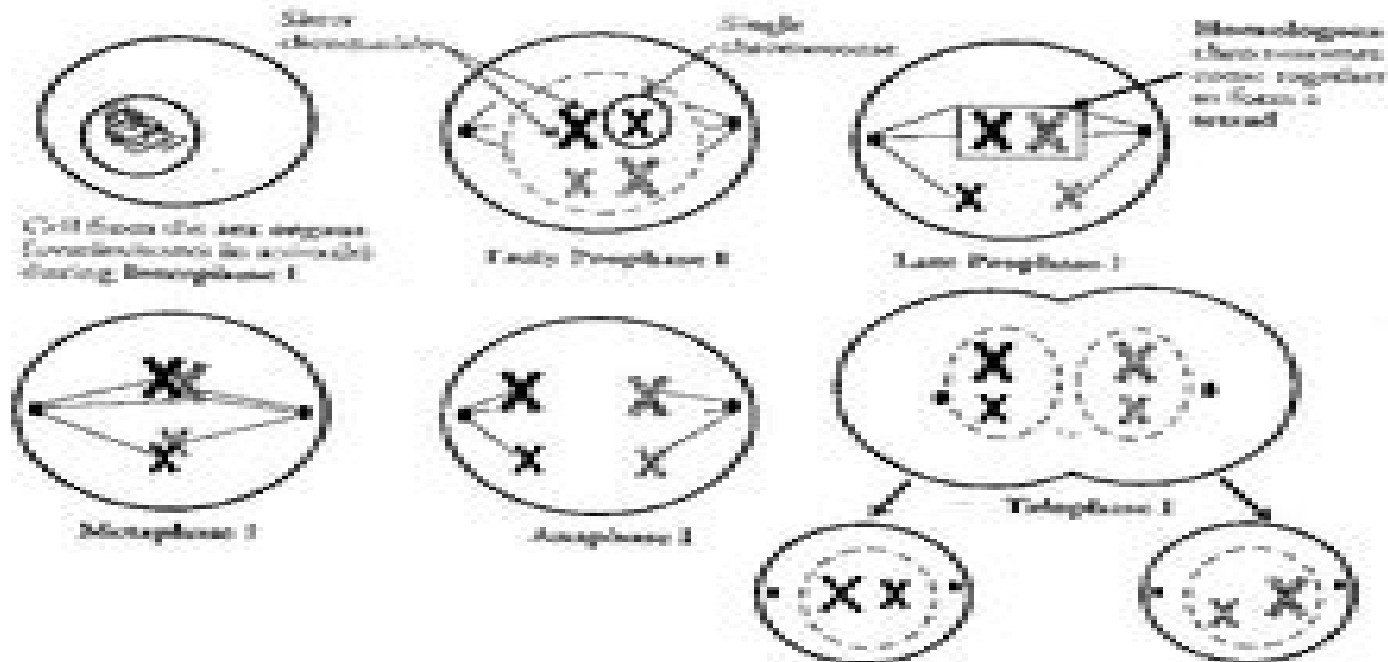

How does sexual reproduction lead to genetic variation?

KEY

Why?

Cells reproduce through mitosis to make exact copies of the original cell. This is done for growth and repair. Sexually-reproducing organisms have a second form of cell division that produces reproductive cells with half the number of chromosomes. This process is called *meiosis*, and without it, humans, oak trees, bacteria, and all other sexually-reproducing organisms would be very different than they are today.

Model 1 – Meiosis I

1. According to Model 1, in what type of organism are the cells that enter meiosis I found?
Sex organs (ovaries and testes).
2. Considering what you already know about animals in cells, what events must take place during Anaphase I before a cell proceeds to division?
DNA replication.

Answer To Mitosis Packet

Annelies Wilder-Smith

Answer To Mitosis Packet:

Whispering the Techniques of Language: An Mental Journey through **Answer To Mitosis Packet**

In a digitally-driven world where screens reign supreme and immediate communication drowns out the subtleties of language, the profound secrets and emotional nuances hidden within phrases frequently move unheard.
