Ann Easterbrooks, Jayanthi Mistry, 2012-10-16 Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology. A Recursive Vision Peter

Harries-Jones, 1995-01-01 Gregory Bateson was one of the most original social scientists of this century. He is widely known as author of key ideas used in family therapy, including the well-known condition called double bind. He was also one of the most influential figures in cultural anthropology. In the decade before his death in 1980, Bateson turned toward a consideration of ecology. Standard ecology concentrates on an ecosystem's biomass and on energy budgets supporting life. Bateson came to the conclusion that understanding ecological organization requires a complete switch in scientific perspective. He reasoned that ecological phenomena must be explained primarily through patterns of information and that only through perceiving these informational patterns will we uncover the elusive unity or integration of ecosystems. Bateson believed that relying upon the materialist framework of knowledge dominant in ecological science will deepen errors of interpretation and, in the end, promote eco-crisis. He saw recursive patterns of communication as the basis of order in both natural and human domains. He conducted his investigation first in small-scale social settings, then among octopus, otters, and dolphins. Later, he took these investigations to the broader setting of evolutionary analysis and developed a framework of thinking he called an ecology of mind. Finally, his inquiry included an ecology of mind in ecological settings, a recursive epistemology. This is the first study of the whole range of Bateson's ecological thought, a comprehensive presentation of Bateson's matrix of ideas. Drawing on unpublished letters and papers, Harries-Jones clarifies themes scattered throughout Bateson's own writings, revealing the conceptual consistency inherent in Bateson's position and elaborating ways in which he pioneered aspects of late twentieth-century thought. **Bibliographic Guide to Education**, 1989 **Koedoe**, 1994
