

Assume that lines that appear to be tangent are tangent.
 C is the center of each circle. Find the value of x .

$$x = 180^\circ - 90^\circ - 58^\circ$$

$$x = 32^\circ$$

$$x = 360^\circ - 90^\circ - 90^\circ - 130^\circ$$

$$x = 50^\circ$$

In each diagram, $\overrightarrow{AB}$ is tangent to $\odot C$ at B . Find the value of x .

$$x^2 + 3^2 = (3 + 7)^2$$

$$x^2 + 9 = 100$$

$$x = \sqrt{91}$$

$$x \approx 9.54$$

$$12^2 + 9^2 = (x + 9)^2$$

$$225 = (x + 9)^2$$

$$\sqrt{225} = \sqrt{(x + 9)^2}$$

 Equations provides a clear and concise presentation of differential equations for undergraduates and beginning graduate
 students There is more than enough material here for a year long course In fact the text developed from the author's notes
 for three courses the undergraduate introduction to ordinary differential equations the undergraduate course in Fourier
 analysis and partial differential equations and a first graduate course in differential equations The first four chapters cover
 the classical syllabus for the undergraduate ODE course leavened by a modern awareness of computing and qualitative
 methods The next two chapters contain a well developed exposition of linear and nonlinear systems with a similarly fresh
 approach The final two chapters cover boundary value problems Fourier analysis and the elementary theory of PDEs The
 author makes a concerted effort to use plain language and to always start from a simple example or application The
 presentation should appeal to and be readable by students especially students in engineering and science Without being

excessively theoretical the book does address a number of unusual topics Massera's theorem Lyapunov's inequality the isoperimetric inequality numerical solutions of nonlinear boundary value problems and more There are also some new approaches to standard topics including a rethought presentation of series solutions and a nonstandard but more intuitive proof of the existence and uniqueness theorem The collection of problems is especially rich and contains many very challenging exercises Philip Korman is professor of mathematics at the University of Cincinnati He is the author of over one hundred research articles in differential equations and the monograph Global Solution Curves for Semilinear Elliptic Equations Korman has served on the editorial boards of Communications on Applied Nonlinear Analysis Electronic Journal of Differential Equations SIAM Review and Differential Equations and Applications *Calculus* Howard Anton, Irl C.
