*The Purpose of Change is Problem Solving* Janos Korn, 2016-02-28 Any part of the world can be viewed and modelled in terms of its chosen qualitative and or quantitative properties OR its structure The former approach has been used by nearly the whole of human intellectual

endeavor i.e. conventional science of physics the arts etc Development of the latter or the systemic view is the subject matter of the current work The Purpose of Change is Problem Solving suggests that the structural view is empirical pervasive throughout experience and as such results in a single domain as opposed to conventional science which consists of many domains like mechanics electricity etc Thus a unique approach is required which is based on general principles of systems translated into operational form by the symbolism of processed natural language called linguistic modelling of scenarios which can carry mathematics and uncertainties To model scenarios with complex structure a description or story in natural language is expressed in terms of homogenous language of one and two place sentences the elementary constituents of which complex structures can be constructed like a variety of buildings from bricks To correspond to the single domain based on the logic of causation a single scheme of Management producers Product User consumer is proposed which is immediately applicable to structuring scenarios and guides their detailed linguistic modelling or design The approach subject to debate can have significant impact on society and education especially that of engineering which lacks a comprehensive theory of structure of problematic scenarios
