THE TRUTH OF THE ORIGIN OF THE UNIVERSE Sabrie Soloman, 2024-06-12 Creation Big Bang Science Fiction or Science Madness The debate between creationism and scientific theories of the origin of the universe has been an ongoing and contentious one On one side we have the belief in a divine Creator who is responsible for the creation of the world in six days as described in the Bible On the other side we have scientific theories such as the Big Bang which posits that the universe began with a massive explosion around 13.8 billion years ago For those who adhere to the belief in a Creator the concept of a six day creation holds immense significance This belief is rooted in faith and is a fundamental tenet of many religious traditions The idea that a higher power carefully constructed the universe day by day is a source of comfort and meaning for many people Some may argue that the Big Bang theory is nothing more than science fiction or science madness dismissing it as a fanciful and unsubstantiated idea

Pathophysiological Mechanisms of Sarcopenia in Aging and in Muscular Dystrophy: A Translational Approach Luciano Merlini, Paolo Bonaldo, Emanuele Marzetti, 2016-01-18 Loss of muscle mass and increased fibrosis characterize both sarcopenia of aging and muscular dystrophy Research is increasingly showing that these two conditions also share several pathophysiological mechanisms including mitochondrial dysfunction increased apoptosis abnormal modulation of autophagy

decline in satellite cells increased generation of reactive oxygen species and abnormal regulation of signaling and stress response pathways This Research Topic will cover several mechanisms involved in aging and dystrophic sarcopenia and explore the therapeutic potential of various strategies for intervention

Using Noise to Characterize Vision Rémy Allard, Jocelyn Faubert, Denis G. Pelli, 2016-03-02 Noise has been widely used to investigate the processing properties of various visual functions e.g. detection discrimination attention perceptual learning averaging crowding face recognition in various populations e.g. older adults amblyopes migraineurs dyslexic children using noise along various dimensions e.g. pixel noise orientation jitter contrast jitter The reason to use external noise is generally not to characterize visual processing in external noise per se but rather to reveal how vision works in ordinary conditions when performance is limited by our intrinsic noise rather than externally added noise For instance reverse correlation aims at identifying the relevant information to perform a given task in noiseless conditions and measuring contrast thresholds in various noise levels can be used to understand the impact of intrinsic noise that limits sensitivity to noiseless stimuli Why use noise Since Fechner named it psychophysics has always emphasized the systematic investigation of conditions that break vision External noise raises threshold hugely and selectively In hearing Fletcher used noise in his famous critical band experiments to reveal frequency selective channels in hearing Critical bands have been found in vision too More generally the big reliable effects of noise give important clues to how the system works And simple models have been proposed to account for the effects of visual noise As noise has been more widely used questions have been raised about the simplifying assumptions that link the processing properties in noiseless conditions to measurements in external noise For instance it is usually assumed that the processing strategy or mechanism used to perform a task and its processing properties e.g. filter tuning are unaffected by the addition of external noise Some have suggested that the processing properties could change with the addition of external noise e.g. change in filter tuning or more lateral masking in noise which would need to be considered before drawing conclusions about the processing properties in noiseless condition Others have suggested that different processing properties or mechanisms could be solicited in low and high noise conditions complicating the characterization of processing properties in noiseless condition based on processing properties identified in noise conditions The current Research Topic probes further into what the effects of visual noise tell us about vision in ordinary conditions Our Editorial gives an overview of the articles in this special issue

Organisations, Environmental Management and Innovation The Open University, This 15 hour free course looked at the ways in which different types of organisation are using innovation to improve their environmental management

Induced Resistance for Plant Defence Andrés A. Borges, Luisa M. Sandalio, 2016-08-18 In this century the human being must face the challenges of producing enough to feed a growing population in a sustainable and environmentally friendly way The yields are with increasing frequency affected by abiotic stresses such as salinity drought and high temperature or by new diseases and plagues The Research Topic on Induced Resistance for Plant Defense focuses

on the understanding the mechanisms underlying plant resistance or tolerance since these will help us to develop fruitful new agricultural strategies for a sustainable crop protection This topic and its potential applications provide a new sustainable approach to crop protection This technology currently can offer promising molecules capable to provide new long lasting treatments for crop protection against biotic or abiotic stresses The aim of this Research Topic is to review and discuss current knowledge of the mechanisms regulating plant induced resistance and how from our better understanding of these mechanisms we can find molecules capable of inducing this defence response in the plant thereby contributing to sustainable agriculture we need for the next challenges of the XXI century

Science in Negotiation Jessica Espey, 2022-11-28 This book explores the role of scientific evidence within United Nations UN deliberation by examining the negotiation of the Sustainable Development Goals SDGs endorsed by Member States in 2015 Using the SDGs as a case study this book addresses a key gap in our understanding of the role of evidence in contemporary international policy making It is structured around three overarching questions 1 how does scientific evidence influence multilateral policy development within the UN General Assembly 2 how did evidence shape the goals and targets that constitute the SDGs and 3 how did institutional arrangements and non state actor engagements mediate the evidence to policy process in the development of the SDGs The ultimate intention is to tease out lessons on global policy making and to understand the influence of different evidence inputs and institutional factors in shaping outcomes To understand the value afforded to scientific evidence within multilateral deliberation a conceptual framework is provided drawing upon literature from policy studies and political science including recent theories of evidence informed policy making and new institutionalism It posits that the success or failure of evidence informing global political processes rests upon the representation and access of scientific stakeholders levels of community organisation the framing and presentation of evidence and time including the duration over which evidence and key conceptual ideas are presented Cutting across the discussion is the fundamental question of whose evidence counts and how expertise is defined The framework is tested with specific reference to three themes that were prominent during the SDG negotiation process public health articulated in SDG 3 urban sustainability articulated in SDG 11 and data and

information systems which were a cross cutting theme of the dialogue Within each scientific communities had specific demands and through an exploration of key literature including evidence inputs and UN documentation as well as through key informant interviews the translation of these scientific ideas into policy priorities is uncovered The intended audiences of this book include academic practitioners studying evidence to policy processes multilateral negotiation and or UN policy planning The book also intends to provide useful insights for policy makers including UN diplomats officials and staff working to improve the quality of evidence communication and uptake within multilateral institutions Finally it aims to support the whole global academic and scientific community including students of public policy and political science by providing insights on how to input into influence and even shape international evidence informed policy making *Towards an embodied science of intersubjectivity: Widening the scope of social understanding research* Ezequiel Di Paolo,Hanne De Jaegher,2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people s intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of dis connection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory
