

13-4 Practice Compound Probability

Form G

For Exercises 1–3, determine whether the events are independent or dependent.

1. You roll a 2 on a number cube and spin a 3 on a spinner.
2. You choose a King from a deck of cards and get heads in a coin toss.
3. You roll a number cube and get a 6, and roll again if the first roll is a 6.
4. What is $P(A \text{ and } B)$ if $P(A) = \frac{1}{2}$ and $P(B) = \frac{2}{3}$, where A and B are independent events?
5. What is the probability of rolling a 4 on a fair number cube and getting "tails" when tossing a coin?
6. What is $P(A \text{ or } B)$ if $P(A) = 22\%$ and $P(B) = 17\%$, where A and B are mutually exclusive events?
7. At a local high school, 34% of the students take a bus to school and 26% of the students walk to school. What is the probability of randomly selecting a student that takes a bus or walks to school?
8. What is $P(A \text{ or } B)$ if $P(A) = \frac{1}{4}$ and $P(B) = \frac{1}{2}$, where A and B are overlapping events?
9. A spinner has 8 equal sections numbered 1 to 8. What is the probability of the spinner stopping on a number that is a multiple of 3 or is greater than 5?
10. A local aquarium has 6 turtles, 12 penguins, and 8 sharks. You randomly select 1 animal to watch. What is the probability that you select a turtle or a shark?
11. In a local town, 55% of the residents drive to work, 25% of the residents own a dog, and 6% of the residents walk to work. Find the probability that a randomly chosen resident owns a dog or walks to work.

Use the spinner at the right for Exercises 12–14.

12. What is the probability of the arrow stopping on a consonant or one of the first 4 letters of the alphabet?
13. What is the probability of the arrow stopping on "K" on the first spin and "J" on the second spin?
14. What is the probability of the arrow stopping on "J" or "A" on one spin?

Exercise Manual in Probability Theory J. Stoyanov, I. Mirazchiiski, Z. Ignatov, M. Tanushev, 2012-12-06 Approach your problems from the right end It isn't that they can't see the solution It is and begin with the answers Then one day that they can't see the problem perhaps you will find the final question G K Chesterton The Scandal of Father The Hermit Clad in Crane Feathers in R Brown The point of a Pin van Gulik's The Chinese Maze Murders Growing specialization and diversification have brought a host of monographs and textbooks on increasingly specialized topics However the tree of knowledge of mathematics and related fields does not grow only by putting forth new branches It also happens quite often in fact that branches which were thought to be completely disparate are suddenly seen to be related Further the kind and level of sophistication of mathematics applied in various sciences has changed drastically in recent years measure theory is used non trivially in regional and theoretical economics algebraic geometry interacts with physics the Minkowsky lemma coding theory and the structure of water meet one another in packing and covering theory quantum fields crystal defects and mathematical programming profit from homotopy theory Lie algebras are relevant to filtering and prediction and electrical engineering can use Stein spaces And in addition to this there are such new emerging subdisciplines as experimental mathematics CFD completely integrable systems chaos synergetics and large scale order which are almost impossible to fit into the existing classification schemes They draw upon widely different sections of mathematics Semiconductor Optics and Transport Phenomena Wilfried Schäfer, Martin Wegener, 2013-06-29 Whenever a physicist visits the physics faculty in Dortmund he/she is bound to hear the success story of the so called integrated course a four semester introduction to physics These lectures are given by two professors simultaneously one experimentalist and one theorist After having asked the common question How many professors have killed each other the visitor usually realizes that this is an excellent way of presenting a coherent introduction to both experimental and theoretical physics We decided to try this concept in an advanced course on semiconductor physics At that point the typical student has already had an introductory course in solid state physics and solid state theory The aim of the lectures was to repeat some of the most important well known classics of semiconductor optics and transport and eventually guide the students to topics of current interest in research When preparing the lectures we did not find a textbook addressing all these aspects experiment and theory in semiconductor optics and transport which made us write this book This book presents the phenomenology and a simple intuitive understanding of many effects and in addition attempts to explain the underlying physics on a consistent theoretical footing Calculations are presented such that a student should be able to follow them with a pencil and a piece of paper **Elements of Simulation** Byron J.T. Morgan, 2018-12-13 The use of simulation in statistics dates from the start of the 20th century coinciding with the beginnings of radio broadcasting and the invention of television Just as radio and television are now commonplace in our everyday lives simulation methods are now widely used throughout the many branches of statistics as can be readily

appreciated from reading Chapters 1 and 9 The book has grown out of a fifteen hour lecture course given to third year mathematics undergraduates at the University of Kent and it could be used either as an undergraduate or a postgraduate text Simulation may either be taught as an operational research tool in its own right or as a mathematical method which cements together different parts of statistics and which may be used in a variety of lecture courses In the last three chapters indications are made of the varied uses of simulation throughout statistics Alternatively simulation may be used to motivate subjects such as the teaching of distribution theory and the manipulation of random variables and Chapters 4 and 5 especially will hopefully be useful in this respect The Official ACT Prep Pack with 5 Full Practice Tests (3 in Official ACT Prep Guide + 2 Online) ACT,2018-01-31 From the makers of the ACT test Cover

Probability Jim Pitman,2012-12-06 This is a text for a one quarter or one semester course in probability aimed at students who have done a year of calculus The book is organised so a student can learn the fundamental ideas of probability from the first three chapters without reliance on calculus Later chapters develop these ideas further using calculus tools The book contains more than the usual number of examples worked out in detail The most valuable thing for students to learn from a course like this is how to pick up a probability problem in a new setting and relate it to the standard body of theory The more they see this happen in class and the more they do it themselves in exercises the better The style of the text is deliberately informal My experience is that students learn more from intuitive explanations diagrams and examples than they do from theorems and proofs So the emphasis is on problem solving rather than theory The Official ACT Prep Guide 2020 - 2021, (Book + 5 Practice Tests + Bonus Online Content) ACT,2020-04-21 The only guide from the ACT organization the makers of the exam with 5 genuine full length practice tests in print and online The Official ACT
