

Equation of Tangent

The **equation of a tangent** is the equation of the straight line touching the circumference of a circle at only one point.

m_1 = gradient of radius

We find this using the gradient formula:

$$m = \frac{y_2 - y_1}{x_2 - x_1}$$

m_2 = gradient of tangent

Tangent perpendicular to radius: $m_1 m_2 = -1$

$$m_2 = \frac{-1}{m_1}$$

negative reciprocal

Finally, find the y -intercept of the tangent for the full equation.

Conformal Differential Geometry and Its Generalizations Maks A. Akivis, Vladislav V. Goldberg, 2011-09-20

Comprehensive coverage of the foundations applications recent developments and future of conformal differential geometry Conformal Differential Geometry and Its Generalizations is the first and only text that systematically presents the foundations and manifestations of conformal differential geometry It offers the first unified presentation of the subject which was established more than a century ago The text is divided into seven chapters each containing figures formulas and historical and bibliographical notes while numerous examples elucidate the necessary theory Clear focused and expertly synthesized Conformal Differential Geometry and Its Generalizations Develops the theory of hypersurfaces and submanifolds of any dimension of conformal and pseudoconformal spaces Investigates conformal and pseudoconformal structures on a manifold of arbitrary dimension derives their structure equations and explores their tensor of conformal curvature Analyzes the real theory of four dimensional conformal structures of all possible signatures Considers the analytic and differential geometry of Grassmann and almost Grassmann structures Draws connections between almost Grassmann structures and web theory Conformal differential geometry a part of classical differential geometry was founded at the turn of the century and gave rise to the study of conformal and almost Grassmann structures in later years Until now no book has offered a systematic presentation of the multidimensional conformal differential geometry and the conformal and almost Grassmann structures After years of intense research at their respective universities and at the Soviet School of Differential Geometry Maks A Akivis and Vladislav V Goldberg have written this well conceived expertly executed volume to fill a void in the literature Dr Akivis and Dr Goldberg supply a deep foundation applications numerous examples and recent developments in the field Many of the findings that fill these pages are published here for the first time and previously published results are reexamined in a unified context The geometry and theory of conformal and pseudoconformal spaces of arbitrary dimension as well as the theory of Grassmann and almost Grassmann structures are discussed and analyzed in detail The topics covered not only advance the subject itself but pose important questions for future investigations This exhaustive groundbreaking text combines the classical results and recent developments and findings This volume is intended for graduate students and researchers of differential geometry It can be especially useful to those students and researchers who are interested in conformal and Grassmann differential geometry and their applications to theoretical physics

Shape Interrogation for Computer Aided Design and Manufacturing Nicholas M. Patrikalakis, Takashi Maekawa, 2009-11-27 Shape interrogation is the process of extraction of information from a geometric model It is a fundamental component of Computer Aided Design and Manufacturing CAD CAM systems The authors focus on shape interrogation of geometric models bounded by free form surfaces Free form surfaces also called sculptured surfaces are widely used in the bodies of ships automobiles and aircraft which have both functionality and attractive shape requirements Many electronic devices as well as consumer products are

designed with aesthetic shapes which involve free form surfaces This book provides the mathematical fundamentals as well as algorithms for various shape interrogation methods including nonlinear polynomial solvers intersection problems differential geometry of intersection curves distance functions curve and surface interrogation umbilics and lines of curvature geodesics and offset curves and surfaces This book will be of interest both to graduate students and professionals
