Turning Points in Solid-state, Materials and Surface State Kenneth D. M. Harris, Peter P. Edwards, Royal Society of Chemistry (Great Britain), 2008

The scientific exploration of solid materials represents one of the most important fascinating and rewarding areas of scientific endeavour in the present day not only from the viewpoint of advancing fundamental understanding but also from the industrial perspective given the immense diversity of applications of solid materials across the full range of commercial sectors

Turning Points in Solid State Materials and Surface Science provides a state of the art survey of some of the most important recent developments across the spectrum of solid state materials and surface sciences while at the same time reflecting on key turning points in the evolution of this scientific discipline and projecting into the directions for future research progress

The book serves as a timely tribute to the life and work of Professor Sir John Meurig Thomas FRS who has made monumental contributions to this field of science throughout his distinguished 50 year career in research during which he has initiated developed and exploited many important branches of this field

Indeed the depth and breadth of his contributions towards the evolution and advancement of this scientific discipline and his critical role in elevating this field to the important position that it now occupies within modern science are demonstrated recurrently throughout the chapters of this book

Individual chapters are contributed by internationally leading experts in their respective fields and the topics covered include solid state chemistry of inorganic and organic materials heterogeneous catalysis surface science and materials science with one section of the book focusing on modern developments in electron microscopy and its contributions to chemistry and materials science

The book serves as a modern and up to date monograph in these fields and provides a valuable resource to researchers in academia and industry who require a comprehensive source of information on this important and rapidly developing subject

Once again it has become necessary to produce a new edition in order to update material provided in earlier editions and to add new descriptions of recently emerging

technology All of the chapters have been revised to include new developments and to incorporate additional literature references In the past few years there has been a vast expansion of worldwide telecommunications and data transmission networks In many localities fiber to the home and integrated services digital networks ISDN have become a reality Many people are now logging on to the Internet and the World Wide Web The growth of these networks has created a strong demand for inexpensive yet efficient and reliable integrated optic components such as signal splitters couplers and multiplexers Because of this demand there has been a great deal of work recently on devices made using polymers and glasses Descriptions of these components have been added to the book in the appropriate chapters A number of new practice problems have been added and an updated booklet of problem solutions is available The supplementary series of videotaped lectures described in the preface to earlier editions continues to be available Inquiries regarding these materials should be sent directly to the author The author wishes to thank Mrs Barbara Westog who helped with the organization of new material and typed the revisions

Frontiers in Superconducting Materials Anant V. Narlikar, 2005-12-06 Frontiers in Superconducting Materials gives a state of the art report of the most important topics of the current research in superconductive materials and related phenomena It comprises 30 chapters written by renowned international experts in the field It is of central interest to researchers and specialists in Physics and Materials Science both in academic and industrial research as well as advanced students It also addresses electronic and electrical engineers Even non specialists interested in superconductivity might find some useful answers

Thin Film Solar Cells K. L. Chopra, S. R. Das, 2013-11-11 You are the eye of the world You are the soul of all embodied beings You are the source of all creatures You are the discipline of all engaged in work Translated from Mahabharata 3rd Century BC Today energy is the lifeline and status symbol of civilized societies All nations have therefore embarked upon Research and Development programs of varying magnitudes to explore and effectively utilize renewable sources of energy Albeit a low grade energy with large temporal and spatial variations solar energy is abundant cheap clean and renewable and thus presents a very attractive alternative source The direct conversion of solar energy to electricity photovoltaic effect via devices called solar cells has already become an established frontier area of science and technology Born out of necessity for remote area applications the first commercially manufactured solar cells single crystal silicon and thin film CdS Cu₂S were available well over 20 years ago Indeed all space vehicles today are powered by silicon solar cells But large scale terrestrial applications of solar cells still await major breakthroughs in terms of discovering new and radical concepts in solar cell device structures utilizing relatively more abundant cheap and even exotic materials and inventing simpler and less energy intensive fabrication processes No doubt this extraordinary challenge in R D has led to a virtual explosion of activities in the field of photovoltaics in the last several years
