

Issue of Global Warming

In recent years, Global Warming and Climate change frequently appear in our lives. There are many different reasons caused the global warming include natural causes and human influence. But human do not care the earth, so human cause global warming is more than natural causes global warming. Global warming refers only to the Earth's rising surface temperature, while climate change is a change in global or regional climate patterns and attributed the increased levels of atmospheric carbon dioxide produced by the use of fossil fuels. It can be seeming a relation that influence each other.

Industrial revolution has left a big behind for global warming. We always like using fossil fuels for power machines because it can use less labor and more efficient. For the industrialization we are produce pretty much carbon emissions then released into the atmosphere. As carbon released into the atmosphere and mixture with air then created CO₂ gas also this gas is a key player caused global warming. Imagine if Australia increased 1 to 2 degree temperature it will around 30 to 50 species of native flora and fauna can possibly become extinct. What about other country will be facing?

There is also a common misunderstand that global warming only effect less cold and the weather in summer will be hotter, once the temperatures over people's normal body temperature, it will become very difficult for the body to cool down. It will be a challenge for the patient people and olders. Then it means will cause the increases in the use of air conditioning, which requires more energy to use this will created more additional pollute gases like CO₂. In 2015 the hottest year, there are many countries faced extreme heat wave and India was suffering the second most deadly heat wave.

Australia is also a country vulnerable to the effects of global warming projected. Due to the degree increased, the Great Barrier Reef has experienced two major bleaching in 1998 and 2002, respectively 42% and 54% of reefs were affected by bleaching. When the ocean absorbs the carbon dioxide from the air and lead to ocean acidification, it will be a transfer between ocean and air which cause large scale winds resulting in extreme weather, it will straightly damage human housing. The fees for rebuilding will hurt the Australian hip pocket and leave people become homeless.
