Based Reforms William J. Mathis, Tina M. Trujillo, 2016-06-01 Over the past twenty years educational policy has been characterized by top down market focused policies combined with a push toward privatization and school choice The new Every Student

Succeeds Act continues along this path though with decision making authority now shifted toward the states These market based reforms have often been touted as the most promising response to the challenges of poverty and educational disenfranchisement But has this approach been successful Has learning improved Have historically low scoring schools turned around or have the reforms had little effect Have these narrow conceptions of schooling harmed the civic and social purposes of education in a democracy This book presents the evidence Drawing on the work of the nation s most prominent researchers the book explores the major elements of these reforms as well as the social political and educational contexts in which they take place It examines the evidence supporting the most common school improvement strategies school choice reconstitutions or massive personnel changes and school closures From there it presents the research findings cutting across these strategies by addressing the evidence on test score trends teacher evaluation miracle schools the Common Core State Standards school choice the newly emerging school improvement industry and re segregation among others The weight of the evidence indisputably shows little success and no promise for these reforms Thus the authors counsel strongly against continuing these failed policies The book concludes with a review of more promising avenues for educational reform including the necessity of broader societal investments for combatting poverty and adverse social conditions While schools cannot single handedly overcome societal inequalities important work can take place within the public school system with evidence based interventions such as early childhood education detracking adequate funding and full service community schools all intended to renew our nation s commitment to democracy and equal educational opportunity

Talukdar, 2016-09-07 Growing plants have a constitutive demand for sulfur to synthesize proteins sulfolipids and other essential sulfur containing molecules for growth and development The uptake and subsequent distribution of sulfate is regulated in response to demand and environmental cues The importance of sulfate for plant growth and vigor and hence crop yield and nutritional quality for human and animal diets has been clearly recognized The acquisition of sulfur by plants however has become an increasingly important concern for the agriculture due to the decreasing S emissions from industrial sources and the consequent limitation of inputs from atmospheric deposition Molecular characterization involving transcriptomics proteomics and metabolomics in *Arabidopsis thaliana* as well as in major crops revealed that sulfate uptake distribution and assimilation are finely regulated depending on sulfur status and demand and that these regulatory networks are integrated with cell cycle photosynthesis carbohydrate metabolism hormonal signaling uptake and assimilation of other nutrients etc to enable plant growth development and reproduction even under different biotic and abiotic stresses This knowledge can be used to underpin approaches to enhance plant growth and nutritional quality of major food crops around the world Although considerable progress has been made regarding the central role of sulfur metabolism in plant growth development and stress response several frontiers need to be explored to reveal the mechanisms of the cross talk between sulfur metabolism and these processes In this research topic the knowledge on plant sulfur metabolism is reviewed and updated Focus is put not only on molecular mechanisms of control of sulfur metabolism but also on its integration with other vital metabolic events The topic covers 4 major areas of sulfur research sulfate uptake assimilation and metabolism regulation and role in stress response We hope that the topic will promote interaction between researchers with different expertise and thus contribute to a more integrative approach to study sulfur metabolism in plants
