

DIRECT, INVERSE AND JOINT VARIATION WORKSHEET

Direct Variation: $y = kx$

Inverse Variation: $y = k/x$

Joint Variation: $y = kxz$

Combined Variation: Combining any of the three types of variation listed above within a single problem.

Four Steps to Solve a Variation Problem

1. Write the general variation formula for the problem.
2. Use the formula to find the constant of variation, k .
3. Rewrite the formula, including the value of k .
4. Answer the question.

State whether each equation represents a direct, inverse, or joint variation. Name the constant of variation.

1) $y = 2x$

2) $\frac{x}{5} = y$

3) $xy = 12$

4) $D = \frac{3}{4}gh$

Translate each statement into a formula. Use k as the constant of variation.

5) E varies jointly as M and the square of V.

6) The volume, V, of a gas varies directly as the temperature, T, and inversely as the pressure P.

7) The mass, M, of a cement block varies jointly as the length, L, width, W, and thickness, T, of the block.

8) P varies directly as the square of V and inversely as R.

Write an equation for each statement. Then, solve the equation.

9) If y varies inversely as x and $y = 2$ when $x = 8$, find x when $y = 14$.

10) Suppose y varies jointly with x and z . If $y = 20$ when $x = 2$ and $z = 5$, find y when $x = 14$ and $z = 8$.

11) If y varies inversely as x and $x = 7$ when $y = 21$, find y when $x = 42$.

12) Find y when $x = 1.5$, if y varies directly as x and $y = -16$ when $x = 6$.

Making Connections, 2006-01-01 In this book, comparisons are made between the practices of classrooms in a variety of different school systems around the world. The abiding challenge for classroom research is the realization of structure in diversity. The structure in this case takes the form of patterns of participation, regularities in the social practices of mathematics classrooms. The expansion of our field of view to include international rather than just local classrooms increases the diversity and heightens the challenge of the search for structure while increasing the significance of any

structures once found In particular this book reports on the use of lesson events as an entry point for the analysis of lesson structure International research offers opportunities to study settings and characteristics untenable in the researcher s local situation Importantly international comparative studies can reveal possibilities for practice that would go unrecognized within the established norms of educational practice of one country or one culture Our capacity to conceive of alternatives to our current practice is constrained by deep rooted assumptions reflecting cultural and societal values that we lack the perspective to question The comparisons made possible by international research facilitate our identification and interrogation of these assumptions Such interrogation opens up possibilities for innovation that might not otherwise be identified expanding the repertoire of mathematics teachers internationally and providing the basis for theory development
