

Science 2C: Kingdom Spotlight- Monerans and Protists.

Warm-up: Can you describe one unique trait of each that no other group has?

Can you describe a kingdom with **brevity**? Can you get me to guess it?

—Kingdom Spotlight— Monerans — **Bacteria, slime molds**

Monerans are the most **basic** and **oldest** forms of life.

Monerans do not contain major organ cell structures.
Organelles

The monerans can...

Move: It uses those tentacles, or its cell membrane, to wiggle about.

Eat: Plasmid: This is how the cell consumes nutrients, the cell allows **food to enter and waste to leave**.

Plasmids use chemicals to break down material. Some kinds of monerans can even break down inorganic compounds, like hydrogen sulfide, and can survive deep under the ocean by thermal vents.

Generally, monerans are specialized to consume one sort of energy source as they lack the complexity to survive on different nutrients. Then again, you can stand in the sun all you want but you are not going to do photosynthesis. **But you can consume different kinds of food (protein, fat, sugar) while monerans are limited to one sort of energy source.**

Sometimes a moneran is covered by a cell wall, or a capsule (armor), or neither. The cell membrane allows for material to enter and exist in the cell.
Nutrients in / waste out!

Replicate: Its DNA is not in a nucleus, it's just in the cell. The Ribosomes help read the DNA and make more if the cell wants to make another copy of itself.
