Assistive Technologies and Computer Access for Motor Disabilities Kouroupetroglou, Georgios, 2013-08-31

Individuals with disabilities that impede their range of motion often have difficulty accessing technologies. With the use of computer-based assistive technology devices, tools, and services can be used to maintain and improve the functional capabilities of motor disabilities. Assistive Technologies and Computer Access for Motor Disabilities investigates solutions to the difficulties of impaired technology access by highlighting the principles, methods, and advanced technological solutions for those with motor impairments. This reference source is beneficial to academia, industry, and various professionals in disciplines such as rehabilitation science, occupational therapy, human-computer interface development, ergonomics, and teaching in inclusive and special education. This publication is integrated with its pair book *Disability Informatics and Web Accessibility for Motor Limitations*. *Reconceptualizing STEM Education* Richard A. Duschl, Amber S. Bismack, 2016-01-08. *Reconceptualizing STEM Education* explores and maps out research and development ideas and issues around five central practice themes: Systems Thinking, Model-Based Reasoning, Quantitative Reasoning, Equity, Epistemic and Ethical Outcomes, and STEM Communication and Outreach. These themes are aligned with the comprehensive agenda for the reform of science and engineering education set out by the 2015 PISA Framework, the US Next Generation Science Standards, and the US National Research Council's *A Framework for K-12 Science Education*. The new practice-focused agenda has implications for the redesign of pre-K-12 education for alignment of curriculum, instruction, assessment, STEM teacher education, and professional development, postsecondary, further, and graduate studies, and out-of-school informal education. In each section, experts set out powerful ideas followed by two eminent discussant responses that both respond to and provoke additional ideas from the lead papers. In the associated website, highly distinguished nationally recognized STEM education scholars and policymakers engage in deep conversations and considerations addressing core practices that guide STEM education.

The Complexities, Key Concepts and Mechanisms of Immunology Seema Tripathy, Rashmi Rekha Sahu, 2024-07-23

This concise and comprehensive guide describes the complexities, key concepts, and mechanisms of the immune system in a simplified manner. The book provides a clear and accessible overview of the body's defence mechanisms, covering various aspects such as the structure and function of immune cells, the mechanisms of antigen recognition and response, the regulation of immune responses through the release of cytokines, and dysfunctions of the immune system which lead to autoimmunity and hypersensitivity. Additionally, it covers different immunological techniques and the latest developments in immunotherapy, including the use of monoclonal antibodies. Homeostasis and Allostasis of Thyroid Function Johannes W. Dietrich, John E. M. Midgley, Rudolf Hoermann, 2018-08-29 The discovery of the negative feedback of thyroid hormones on pituitary thyroid stimulating hormone TSH secretion a classical endocrine feedback control system has shaped diagnosis and treatment of thyroid disease for the last decades Based on this concept a unique diagnostic category of subclinical thyroid disorders was introduced being defined exclusively by an abnormal TSH response in the presence of thyroid hormone concentrations within the reference range Although this approach was able to deliver a conceptually straightforward disease definition problems surfaced in clinical practice as neither the diagnostic reference range nor the appropriate threshold for initiating substitution treatment are universally agreed upon for subclinical thyroid disorders The situation is further aggravated by the so called syndrome T which comprises a substantial but heterogeneous group of L T4 treated patients with hypothyroidism with reduced quality of life despite normal TSH values A limited understanding of the physiological relationships between TSH and thyroid hormones may be a main reason for clinical difficulties in dealing with the causes of syndrome T and tailoring substitution therapy for hypothyroid patients with subclinical thyroid disorders Feedback regulation has recently been shown to be much more complex than previously assumed The concept of homeostatic control has also been extended to include the lesser known but equally important allostatic thyroid regulation The latter aims at adaptive homeostasis or stability through changing setpoints and modulating structural parameters of feedback control as may be appropriate to adapt to a vast array of conditions spanning from fetal life aging pregnancy exercise starvation obesity psychiatric disorders to the severe non thyroidal illness syndrome A better understanding of homeostatic and allostatic mechanisms which govern the behaviour of pituitary thyroid feedback control is on the horizon This promises to improve the diagnostic utility of laboratory methods laying the foundation for personalised methods to optimise dosage and modality of substitution therapy The emerging new world of thyroid physiology is reflected on the side of clinical medicine in a new relational paradigm for diagnosis and

treatment Considerable progress has been made in this respect in the following key areas the significance of complementary information processing structures within the feedback loop in particular ultrashort feedback of TSH on its own secretion and the action of a TSH T3 shunt unburdening the thyroid from T4 synthesis in imminent thyroid failure the unravelling of spatio temporal dynamics of hormone concentrations ranging from ultradian to circannual rhythms and including hysteresis effects the emergence of non canonical mechanisms of thyroid hormone signalling beyond transcriptional control of gene expression the physiological actions of thyronine metabolites which have been previously regarded as biologically inactive such as thyronamines and iodothyroacetates the characterisation of distinct patterns in the adaptive processes to stress and strain and their conclusive explanation through reactions to type 1 and type 2 allostatic load This collective volume contains the contributions to the Research Topic Homeostasis and Allostasis of Thyroid Function which was originally published by the journal Frontiers in Endocrinology Authored by an international team of experts from three continents the book provides a comprehensive overview on thyroid control from recent research in basic computational and clinical thyroidology Many aspects addressed here can be expected to stimulate future research A more comprehensive view and better integration of in vitro in silico and in vivo investigations will be invaluable in paving the way to this new world of thyroidology **Pelvic**
