Raudenbush, Lisa Rosen, 2017-04-21 The challenge of overcoming educational inequality in the United States can sometimes appear overwhelming and great controversy exists as to whether or not elementary schools are up to the task whether they can ameliorate existing social inequalities and initiate opportunities for economic and civic flourishing for all children This book shows what can happen when you rethink schools from the ground up with precisely these goals in mind approaching educational inequality and its entrenched causes head on student by student Drawing on an in depth study of real schools on the South Side of Chicago Elizabeth McGhee Hassrick Stephen W Raudenbush and Lisa Rosen argue that effectively meeting the challenge of educational inequality requires a complete reorganization of institutional structures as well as wholly new norms values and practices that are animated by a relentless commitment to student learning They examine a model that pulls teachers out of their isolated classrooms and places them into collaborative

environments where they can share their curricula teaching methods and assessments of student progress with a school based network of peers parents and other professionals Within this structure teachers school leaders social workers and parents collaborate to ensure that every child receives instruction tailored to his or her developing skills Cooperating schools share new tools for assessment and instruction and become sites for the training of new teachers Parents become respected partners and expert practitioners work with researchers to evaluate their work and refine their models for educational organization and practice The authors show not only what such a model looks like but the dramatic results it produces for student learning and achievement The result is a fresh deeply informed and remarkably clear portrait of school reform that directly addresses the real problems of educational inequality Congressional Record United States. Cucinotta, Jay S. Loeffler, 2018-01-31 High energy charged particles represent a cutting edge technique in radiation oncology Protons and carbon ions are used in several centers all over the world for the treatment of different solid tumors Typical indications are ocular malignancies tumors of the base of the skull hepatocellular carcinomas and various sarcomas The physical characteristics of the charged particles Bragg peak allow sparing of much

more normal tissues than it is possible using conventional X rays and for this reason all pediatric tumors are considered eligible for protontherapy Ions heavier than protons also display special radiobiological characteristics which make them effective against radioresistant and hypoxic tumors On the other hand protons and ions with high charge Z and energy HZE particles represent a major risk for human space exploration The main late effect of radiation exposure is cancer induction and at the moment the dose limits for astronauts are based on cancer mortality risk The Mars Science Laboratory MSL measured the dose on the route to Mars and on the planet s surface suggesting that a human exploration missions will exceed the radiation risk limits Notwithstanding many studies on carcinogenesis induced by protons and heavy ions the risk uncertainty remains very high In this research topic we aim at gathering the experiences and opinions of scientists dealing with high energy charged particles either for cancer treatment or for space radiation protection Clinical results with protons and heavy ions as well as research in medical physics and pre clinical radiobiology are reported In addition ground based and spaceflight studies on the effects of space radiation are included in this book Particularly relevant for space studies are the clinical results on normal tissue complications and second cancers The eBook nicely demonstrates that particle therapy in oncology and protection of astronauts from space radiation share many common topics and can learn from each other
