This valuable resource provides an overview of recent research and strategies in developing and applying modelling to promote practice based research in STEM education In doing so it bridges barriers across academic disciplines by suggesting activities that promote integration of qualitative science concepts with the tools of mathematics and engineering The volume's three parts offer a comprehensive review by 1 Presenting a conceptual background of how scientific inquiry can be induced in mathematics classes considering recommendations of prior research 2 Collecting case studies that were designed using scientific inquiry process designed for math classes and 3 Exploring future possibilities and directions for the

research included within Among the topics discussed STEM education A platform for multidisciplinary learning Teaching and learning representations in STEM Formulating conceptual framework for multidisciplinary STEM modeling Exploring function continuity in context Exploring function transformations using a dynamic system Scientific Inquiry in Mathematics Theory and Practice delivers hands on and concrete strategies for effective STEM teaching in practice to educators within the fields of mathematics science and technology It will be of interest to practicing and future mathematics teachers at all levels as well as teacher educators mathematics education researchers and undergraduate and graduate mathematics students interested in research based methods for integrating inquiry based learning into STEM classrooms

Systems: Theory and Practice Rudolf Albrecht, 2012-12-06 There is hardly a science that is without the notion of system We have systems in mathematics formal systems in logic systems in physics electrical and mechanical engineering architectural operating infonnation programming systems in computer science management and PJoduction systems in industrial applications economical ecological biological systems and many more In many of these disciplines formal tools for system specification construction verification have been developed as well as mathematical concepts for system modeling and system simulation Thus it is quite natural to expect that systems theory as an interdisciplinary and well established science offering general concepts and methods for a wide variety of applications is a subject in its own right in academic education However as can be seen from the literature and from the curricula of university studies at least in Central Europe it is subordinated and either seen as part of mathematics with the risk that mathematicians who may not be familiar with applications define it in their own way or it is treated separately within each application field focusing on only those aspects which are thought to be needed in the particular application This often results in uneconomical re inventing and re naming of concepts and methods within one field while the same concepts and methods are already well introduced and practiced in other fields The fundamentals on general systems theory were developed several decades ago We note the pioneering work of M A Arbib R E Kalman G 1 Klir M D
