

$$3(2x + 2) - 4(x - 5) = 18$$

$$6x + 6 - 4x + 20 = 18$$

$$6x - 4x + 6 + 20 = 18$$

$$2x + 26 = 18$$

$$2x + 26 - 26 = 18 - 26$$

$$2x = -8$$

$$\frac{2x}{2} = \frac{-8}{2}$$

$$x = -4$$

Check:

$$\begin{aligned} 3(2x + 2) - 4(x - 5) &= 18 \\ 3(2 \cdot -4 + 2) - 4(-4 - 5) &= 18 \\ 18 &= 18 \text{ 😊} \end{aligned}$$

Original Problem – You have 2 sets of parenthesis with 2 terms inside - This means distribute twice!

Distribute both sets of parenthesis.

Rewrite the problem with like terms together. Take the sign in front of the term with it!

Combine like terms.
Now you have a two-step equation.

Subtract 26 from BOTH sides.

Now you have a one-step equation.

Divide by 2 on BOTH sides.

Solution: $x = -4$

Check your solution by substituting back into the original equation. Make sure both sides are equal.

Geers, 2013-03-09 During 27-31 July 1997 thirty seven researchers in acoustics aeronautics elastodynamics electromagnetics hydrodynamics and mathematics participated in a Symposium on Computational Methods for Unbounded Domains The symposium was sponsored by the International Union of Theoretical and Applied Mechanics and was held at the University of Colorado in the United States of America The symposium was opened by Dr Richard Byrny Chancellor of the University's Boulder Campus who concluded his remarks by reading a letter from Professor Bruno A. Bolle JUTAM Representative on the Scientific Committee Thirty three papers were presented About two thirds of these focused on the classical wave equation of acoustics however three papers dealt with hydrodynamic surface waves two with electromagnetic waves three with elastodynamic waves and four with waves in aerodynamics Approximately two thirds of the papers addressed steady state problems with the rest treating problems in the time domain Extended abstracts of the papers appear in this volume arranged in alphabetical order according to the last name of the presenting author A key unifying aspect of the symposium was the creation of four working groups that labored in parallel to formulate benchmark problems for evaluating computational boundaries The working groups reviewed the papers

presented each day searching for benchmark candidates Then they considered other possibilities and organized the ensemble into logical categories At the end of the symposium each group presented its benchmark candidates to the assembly of participants which subsequently made a preliminary consolidation of the benchmarks

Introduction to Aircraft Aeroelasticity and Loads
Jan Robert Wright,Jonathan Edward Cooper,2008-02-08 Aircraft performance is influenced significantly both by aeroelastic phenomena arising from the interaction of elastic inertial and aerodynamic forces and by load variations resulting from flight and ground manoeuvres and gust turbulence encounters There is a strong link between aeroelasticity and loads and these topics have become increasingly integrated in recent years Introduction to Aircraft Aeroelasticity and Loads introduces the reader to the main principles involved in a wide range of aeroelasticity and loads topics Divided into three sections the book begins by reviewing the underlying disciplines of vibrations aerodynamics loads and control It goes on to describe simplified models to illustrate aeroelastic behaviour and aircraft response before introducing more advanced methodologies Finally it explains how industrial certification requirements for aeroelasticity and loads may be met and relates these to the earlier theoretical approaches used Presents fundamentals of structural dynamics aerodynamics static and dynamic aeroelasticity response and load calculations and testing techniques Covers performance issues related to aeroelasticity such as flutter control effectiveness divergence and redistribution of lift Includes up to date experimental methods and analysis Accompanied by a website with MatLAB and SIMULINK programs that relate to the models used Introduction to Aircraft Aeroelasticity and Loads enables the reader to understand the aeroelastic and loads principles and procedures employed in a modern aircraft design office It will appeal to final year undergraduate and masters students as well as engineers who are new to the aerospace industry

Toward a Unified Theory of Problem Solving Mike U. Smith, 2012-11-12 One of the most active fields of educational research in recent years has been the investigation of problem solving performance Two opposing views of current research one suggesting that there are more differences than similarities within different domains and the other stating that there is great similarity lead to a variety of questions Is problem solving a single construct Are there aspects of problem solving performance that are similar across a variety of content domains What problem solving skills learned within one context can be expected to transfer to other domains The purpose of this book is to serve as the basis for the productive exchange of information that will help to answer these questions by drawing together preliminary theoretical understandings sparking debate and disagreement raising new questions and directions and perhaps developing new world views
