Origins Larry Booher, 2020-07-07 *Origins Speak to the Earth* is an anthology of scientific evidence supporting a creation global flood young earth worldview. It is written primarily for students as an alternative to the theory of evolution. God himself formed the earth and made it; he hath established it; he did not create it a waste place; he created it not in vain; he formed it to be inhabited. Isaiah 45:18.

Models of Life Kim Sneppen, 2014-10-02 Reflecting the major advances that have been made in the field over the past decade, this book provides an overview of current models of biological systems. The focus is on simple quantitative models highlighting their role in enhancing our understanding of the strategies of gene regulation and dynamics of information transfer along signalling pathways as well as in unravelling the interplay between function and evolution. The chapters are self-contained, each describing key methods for studying the quantitative aspects of life through the use of physical models. They focus in particular on connecting the dynamics of proteins and DNA with strategic decisions on the larger scale of a living cell, using *E. coli* and phage lambda as key examples. Encompassing fields such as quantitative molecular biology, systems biology, and biophysics, this book will be a valuable tool for students from both biological and physical science backgrounds.

Anti-aging Drugs Alexander M. Vaiserman, 2017-02-01 Aging is a natural phenomenon that is peculiar to all living things. However, accumulating findings indicate that senescence could be postponed or prevented by certain approaches. Substantial evidence has emerged supporting the possibility of radical human health and lifespan extension in particular through pharmacological modulation of aging. A number of natural dietary ingredients and synthetic drugs have been assumed to have geroprotective potential. In the development of anti-aging therapeutics, several cell, insect, and animal models may provide useful starting points prior to human studies. This book provides an overview of current research aimed to search for life-extending medications and describes pharmacological aspects of anti-aging medicine. Readers are introduced to the fascinating historical background of geroprotection in the first chapter. In-depth information on models for investigating geroprotective drugs precedes a section covering anti-aging properties of pharmaceutical compounds such as calorie restriction mimetics, autophagy inducers, senolytics, and mitochondrial antioxidants. Finally, strategies to translate discoveries from aging research into drugs and healthcare policy perspectives on anti-ageing medicine are provided to give a complete picture of the field. A timely and carefully edited collection of chapters by leading researchers in the field; this book will be a fascinating and useful resource for pharmacologists, gerontologists, and any scientifically interested person wishing to know more about the current status of research into anti-aging remedies, challenges, and opportunities.
