Answers For Biology If8765 Female Reproductive System:

Molecular Biology of the Female Reproductive System J. K. Findlay, 2012-12-02 New techniques in cellular and molecular biology have increased our understanding of the mechanisms controlling reproductive function in the female. Emphasizing these new techniques, *Molecular Biology of the Female Reproductive System* provides a state-of-the-art review of local regulatory mechanisms that control reproductive processes. Stressing the interface of endocrinology, immunology, and cell biology, this book concentrates on the autocrine, paracrine, and endocrine systems that regulate both the functions of the ovary and uterus and the interaction between the early embryo and the mother. Covers the mechanisms controlling reproductive function in the female. Offers a cellular and molecular approach to the control of reproductive function. Focuses on the ovary and uterus and includes a discussion of the early embryo including hormonal control of folliculogenesis and luteal function. Cell-cell interactions in the follicle. Role of cytokines in regulating steroid and protein hormone production. Endocrine receptors and mechanisms in ovulation. Cell biology of the oviduct and uterus. Migratory cells. Paracrine regulation. Hormones of the trophoblast and early placenta. Interaction between trophoblast and endometrium. Provides extensive references.

Human Reproductive Biology Mark M. Jones, 2012-12-02 *Human Reproductive Biology* focuses on the processes, concerns, and trends in human reproduction. Divided into four parts with 19 chapters, the book starts by tracing the history of human reproduction biology and the questions and choices involved. The first part focuses on the male and female reproductive systems. The text notes the different organs involved in reproduction, including the penis, scrotum, vagina, oviducts, and mammary glands. The book discusses sexual development and differentiation, particularly noting the variance of sex ducts and glands, external genitalia, and disorders of sexual development and determination. The text also looks at puberty. Concerns include gonadal changes from birth to puberty, mechanisms that influence puberty, and puberty and psychosocial adjustment. The second part deals with menstrual cycle, fertilization, pregnancy, labor, and birth. Some of the concerns include length of menstrual cycle, absence of menstruation, transport of sperm and ovum in the oviduct, and semen release. The text also highlights labor and birthing processes as well as the relationship of neonates and parents. The third part looks at the medical aspects of human reproduction, infertility, and sexually transmitted diseases. Concerns include contraception, abortion, herpes genitalis, and vaginitis. The text folds with discussions on human sexual behavior, population growth, and family planning. Concerns include sexual dysfunction, the effects of overpopulation, and population control. The book is a vital source of data for readers interested in human reproduction.
