Urs Eiholzer,Dagmar l'Allemand,2003 Almost fifty years ago in 1956 three researchers of the University of Zurich Andrea Prader Alexis Labhart and Heinrich Willi first described what is now called the Prader Willi Syndrome PWS The study and the therapy of this syndrome have progressed so rapidly in the past years that the decision was made to share recent advances with the scientific community and to address topics of future research at an international meeting The results of this meeting are presented in this book PWS results from a paternally derived deletion or an imprinting defect on chromosome 15 During their first two years of life patients with PWS suffer from muscle weakness feeding problems and developmental delay From the age of two years onwards they develop an almost insatiable appetite and suffer from obesity short stature hypogonadism and behavior problems As it is becoming increasingly obvious that PWS is a multisystemic disorder improving the quality of life of patients and their families requires broad professional support While growth hormone therapy influences growth and body composition many other problems such as insufficient satiation hypoactivity behavioral difficulties speech problems and mental retardation remain to be addressed Parents need psychological support in their daily battle against the eating disorder and the behavioral problems of their child A comprehensive team approach will yield the best results for both patients and their parents PWS research may also contribute to basic medical research by providing new insights into the metabolism of obese patients whose obesity is caused by factors other than PWS In this way PWS may be used as a model for obesity *Management Science* Samuel Eilon,1995
