HUMAN ANATOMY AND PHYSIOLOGY

Study of the structure and function of the human body

Anatomy

The scientific study of the structure of the human body

Physiology

The scientific study of the function of the human body

Structural levels

Also known as the levels of organization of the human body

- 1. Chemical level - study of the chemical composition of the body
- 2. Cellular level - study of the structure and function of cells
- 3. Tissue level - study of the structure and function of tissues
- 4. Organ level - study of the structure and function of organs
- 5. System level - study of the structure and function of body systems
- 6. Organism level - study of the structure and function of the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body

Organization of cellular levels

Cells are the basic units of structure and function of the human body

Cells are organized into tissues, which are groups of similar cells that work together to perform a specific function

Tissues are organized into organs, which are groups of different tissues that work together to perform a specific function

Organs are organized into systems, which are groups of different organs that work together to perform a specific function

Systems are organized into the human body, which is the whole organism

The Epithelium - This is the outermost layer of the body. It is made up of cells that are closely packed together. It is the first line of defense against the environment.

Connective tissue - This is the tissue that holds the body together. It is made up of cells that are loosely packed together.

Blood - This is the fluid that carries oxygen and nutrients to the cells. It is made up of red blood cells, white blood cells, and platelets.

Muscle - This is the tissue that contracts to move the body. It is made up of long, cylindrical cells.

Nerve - This is the tissue that carries electrical impulses. It is made up of long, thin cells.

ORGANS

Organs are groups of different tissues that work together to perform a specific function

Organs are made up of different tissues that work together to perform a specific function

Organs are organized into systems, which are groups of different organs that work together to perform a specific function

Systems are organized into the human body, which is the whole organism

The human body is made up of different systems that work together to perform a specific function

Respiratory system

The respiratory system is the system that takes in oxygen and removes carbon dioxide

The respiratory system is made up of the trachea, bronchi, and lungs

The trachea is the windpipe that carries air into and out of the lungs

The bronchi are the airways that branch off from the trachea

The lungs are the organs that take in oxygen and remove carbon dioxide

Digestive system

The digestive system is the system that takes in food and breaks it down into nutrients

The digestive system is made up of the mouth, esophagus, stomach, and intestines

The mouth is the organ that takes in food and breaks it down into smaller pieces

The esophagus is the tube that carries food from the mouth to the stomach

The stomach is the organ that breaks down food into nutrients

The intestines are the organs that absorb nutrients from the food

ORGAN SYSTEMS OF THE BODY

The human body is made up of different organ systems that work together to perform a specific function

The organ systems are the groups of organs that work together to perform a specific function

The organ systems are organized into the human body, which is the whole organism

The human body is made up of different organ systems that work together to perform a specific function

The organ systems are the groups of organs that work together to perform a specific function

The organ systems are organized into the human body, which is the whole organism

The human body is made up of different organ systems that work together to perform a specific function

The organ systems are the groups of organs that work together to perform a specific function

The organ systems are organized into the human body, which is the whole organism

The human body is made up of different organ systems that work together to perform a specific function

The organ systems are the groups of organs that work together to perform a specific function

The organ systems are organized into the human body, which is the whole organism
